Title: NOVEL THERAPEUTIC AGENTS FOR THE TREATMENT OF CANCER, METABOLIC DISEASES AND SKIN DISORDERS

Abstract: The present invention is directed to compounds having the structure (I) wherein R₁, R₂, R₃, R₄, R₅, and m are as defined herein. The compounds of this invention are novel therapeutic agents for the treatment of cancer, metabolic diseases and skin disorders in mammalian subjects. These compounds are also useful modulators of gene expression. They exert their activity by interfering with certain cellular signal transduction cascades. The compounds of the invention are thus also useful for regulating cell differentiation and cell cycle processes that are controlled or regulated by various hormones or cytokines. In particular, the invention relates to compounds that induce apoptosis of cancer cells and therefore may be used for the treatment or prevention of cancer, including advanced cancers and pre-cancerous cells. The invention also discloses pharmaceutical compositions and methods of treatment of disease in mammals.
Novel Therapeutic Agents for the Treatment of Cancer, Metabolic Diseases and Skin Disorders

FIELD OF INVENTION

[0001] The invention relates generally to a novel class of retinoids and more specifically to methods of preparation, pharmaceutical compositions, and methods of disease treatment utilizing pharmaceutical compositions comprising these compounds.

BACKGROUND OF THE INVENTION

[0002] Cancer is a complex disease characterized by genetic mutations that lead to uncontrolled cell growth. Cancerous cells are present in all organisms and under normal circumstances their excessive growth is tightly regulated by various physiological factors. One such regulatory process is apoptosis or programmed cell death. When the internal machinery of a cell detects abnormalities in cell division and growth, a signal is propagated within the cell, activating suicide proteins that kill the afflicted cell and prevent its proliferation. Such an apoptotic signal can be triggered, for example, when a ligand or drug interacts with a receptor or protein in the cell.

[0003] Most agents that induce apoptosis in cancer cells (e.g. Doxorubicin and Vincristine) are extremely toxic and cause a number of undesirable side effects. The toxicity associated with these therapies is a result of the non-specific interaction of the drug with the DNA of non-cancerous cells (e.g. intestinal and red blood cells). In order to circumvent such undesirable side effects, more selective compounds have been designed that inhibit one or more signaling proteins, growth factors and/or receptors involved in cancer cell proliferation. Examples include monoclonal antibodies for breast cancer (e.g. Herceptin) and Non-Hodgkin’s Lymphoma (e.g. Rituxan), as well anti-angiogenic drugs for chronic myeloid leukemia (e.g. Gleevec). Since patient populations are genetically heterogeneous, it follows that a single selective therapy will not work in all cases, and as a result, cancer drugs are often used in combination. As such, there is a continual need for improved treatments.

[0004] Retinoids are analogs of vitamin A and regulate cell growth, differentiation, and apoptosis. Retinoids bind to and activate two classes of Nuclear Retinoid receptors: the
retinoic acid receptors (RARα, RARβ, RARγ) and retinoic X receptors (RXRα, RXRβ, RXRγ). These receptors bind to specific sequences of DNA and thereby regulate gene expression. The RAR and RXR receptor isoforms are expressed differently during development and differentiation. These various isoforms can either homodimerize or heterodimerize leading to a variety of protein complexes that regulate different sets of retinoid-induced genes. Activation of each receptor class results in modulation of various biological functions such as cell differentiation, embryonic development, and cell proliferation. Clinical studies have shown that retinoic acid and its synthetic analogs can inhibit the growth and invasion of cancer cells, and induce them to undergo apoptosis, thereby eradicating various types of cancers.

[0005] The novel compounds of this invention modulate the activity of Nuclear Retinoid receptors. These novel compounds are thus useful for regulating cell differentiation and cell cycle processes as well as other cellular signaling processes controlled or regulated by hormones and vitamins such as the thyroid hormone, vitamin D, all-trans retinoic acid and 9-cis-retinoic acid. Hence, conditions and/or diseases that are regulated by the aforementioned entities may be treated using the compounds of this invention. Examples of such conditions include for example cancer, mammary cancer, prostate cancer, kidney cancer, Kaposi's sarcoma, colon cancer, cervical cancer, lung cancer, cutaneous T-cell lymphoma, cancer of the head and neck, cancers of the aerodigestive pathway, skin cancer, bladder cancer, sarcomas, leukoplakias, acute promyelocytic leukemia, acne, psoriasis, aging, wrinkling, diabetes, hyperglycemia, bone calcification, thyroid conditions, and the like.

[0006] Compounds that modulate the activity of RAR receptors are structural analogs of all-trans-retinoic acid. On the other hand compounds that modulate the activity of RXR receptors are structural analogs of 9-cis-retinoic acid (e.g. Bexarotene). The aforementioned modulators of Nuclear Retinoid receptors bear a carboxylic acid group in a specific position of the molecule. This acidic group forms a salt bridge to a basic residue in the binding pocket of the Nuclear Retinoid receptors. Research in this field indicates that removal of this acidic group drastically reduces the potency or the modulator. There are however, other amino acid residues in the binding pocket that can interact with the modulator. None of the modulators of Nuclear Retinoid receptors described to date take advantage of these critical interactions.
Another drawback of the current state of the art is the limited aqueous solubility of the selective Nuclear Retinoid receptor modulators. Said modulators mimic the structures of retinoic acids in order to conform to the three-dimensional structure and the hydrophobic nature of the respective binding pockets. In general, introduction of solubilizing substituents has resulted in lower in vitro binding affinity or increased in vivo metabolism and toxicity.

There exists therefore a need to improve upon the prior art in order to enhance the clinical profile of such therapeutics. Such improvements may be carried out by introducing specially designed functional groups at specific positions on the molecular backbone of the modulator. The novel compounds of this invention address this issue and display enhanced in vitro profiles when compared to compounds of the prior art.

**BRIEF DESCRIPTION OF THE FIGURES**

Figure 1 depicts the growth inhibitory effect of 4 compounds on human head and neck squamous cell carcinoma cells (SCC 103). The figure clearly shows the enhanced activity of example 5, example 6 and example 8 when compared to Bexarotene (4-[1-(3,5,5,8,8-pentamethyl-5,6,7,8-tetrahydro-naphthalen-2-yl)-vinyl]-benzoic acid).

**SUMMARY OF THE INVENTION**

Relative to prior art, this invention provides novel therapeutic agents for the treatment of cancer, metabolic diseases and skin disorders in mammalian subjects. These novel agents bear specially designed functional groups at specific positions on the molecular backbone of the modulator. Such improvements result from non-obvious modifications of the compounds of the prior art. These modifications provide additional interactions between the compounds of this invention and certain amino acid residues in the binding pocket of the Retinoid Nuclear receptors. As a result, the compounds of this invention show enhanced in vitro profiles when compared to compounds of the prior art.

The invention also provides novel compounds that interact with one or more cellular receptors and are useful in the modulation of gene expression.
[0012] Furthermore, the invention also provides novel compounds that are useful in controlling cell cycle, and cell differentiation processes regulated by certain hormones, such as for example the thyroid hormone and the like, and/or certain vitamins, such as for example vitamin D and the like, and/or certain retinoids, such as for example 9-cis-retinoic acid and the like.

[0013] Furthermore, the invention also provides novel compounds that are useful in inducing apoptosis in mammalian cells.

[0014] Furthermore, the invention also provides novel chemical compositions and discloses synthetic methodologies to prepare the same.

[0015] In one aspect, then, the invention relates to novel compounds having the structural formula A

\[ R_1, R_2, R_3, R_4, R_5, R_6 \]

wherein:

- \( R_1 \) is selected from the group consisting of compounds having formulae \( A_1, A_2, A_3, A_4, A_5, \) and \( A_6 \)
wherein:

Z is selected from the group consisting of CH, and nitrogen. Y₃ is selected from the group consisting of C₂₋₈ alkyl, and C₂₋₈ substituted alkyl. R₅ is selected from the group consisting of -OH, alklyloxy, aryloxy, alkylcarboxy, arylcarboxy, -SH, alkylthio, arylthio, -NH₂, alkylamino, arylamino, N-aryl-N-alkylamino, -NHNH₂, alkylhydrazino, arythrazino, N-aryl-N-alkylhydrazino, -NHOR₁₇, -O(P=O)(OR₁₇)(OR₁₈), -OCH₂O(P=O)(OR₁₇)(OR₁₈), and -OSO₃R₁₇. R₇ is selected from the group consisting of hydrogen, halogen, and alkyl. R₁₅ and R₁₆ are independently selected from the group consisting of -OH, alklyoxy, aryloxy, -NH₂, alkylamino, arylamino, N-aryl-N-alkylamino, -NHNH₂, alkylhydrazino, arythrazino, N-aryl-N-alkylhydrazino, -NHOR₁₇, alkyl, and aryl. R₁₇ and R₁₈ are independently selected from the group consisting of hydrogen, alkyl, and aryl, and "* * *" represents the point of attachment of the R₁ to the molecule of formula A;
$R_2$ is selected from the group consisting of

wherein:

$R_5$, $R_9$, $R_{10}$ and $R_{11}$ are independently selected from the group consisting of hydrogen, halogen and alkyl. $Y_1$ and $Y_2$ are independently O, S, NH, or CH$_2$, or $Y_1$ is O, S or NH, and $Y_2$ is CH$_2$, with the proviso that $Y_1$ and $Y_2$ cannot both be O S, or NH if $n$ is 0 or 1, and "*" represents the point of attachment of the $R_2$ to the molecule of formula A

$R_3$ substituents are independently selected from the group consisting of halogen, alkyl, and alkylthoxy.

$R_4$ is selected from the group consisting of alkyl, aryl, heteroaryl, and adamantyl; $R_5$ is selected from the group consisting of alkyl, alkylthio, aryl, and heteroaryl; or $R_4$ and $R_5$ may be linked together to form a substituted or unsubstituted 5- or 6-membered cycloalkyl or cycloalkenyl ring, where said substituents are selected from the group consisting of --OH, =O, halogen, alkyl, and where 1 or 2 of the carbon atoms on said 5- or 6-membered cycloalkyl or cycloalkenyl ring may be optionally replaced by $W$ where $W$ is selected from the group consisting of O, S, N, NH, alkylamino, and arylamino.

m and n are independently 0, 1, 2 or 3, and pharmaceutically acceptable salts thereof.
The non-limiting examples shown in schemes 1-4, illustrate the inventors' preferred methods for carrying out the preparative process of the invention.
[0017] In another aspect, the invention relates to pharmaceutical compositions containing the novel compounds of the invention and to methods of using these compounds for modulating and controlling cell cycle, cell differentiation and apoptosis processes regulated by certain hormones, such as for example the thyroid hormone and the like, and/or certain vitamins, such as for example vitamin D and the like, and/or certain retinoids, such as for example 9-cis-retinoic acid and the like.

[0018] In another aspect, the invention relates to pharmaceutical compositions containing the novel compounds of the invention and to methods of using these compounds for modulating and controlling cell cycle, cell differentiation and apoptosis processes regulated by certain genes, such as for example the Fibroblast Growth Fact Binding Protein mRNA, and the like, and/or certain Signal Transducers and Activators of Transcription, such as for example STAT3, and the like, and/or certain proteins, such as for example Cyclin Dependent Kinase (CDK), Transforming Growth Factor alpha (TGF-α), and the like, and/or certain receptors, such as for example Transforming Growth Factor Receptor (TGF-β), Endothelial Growth Factor Receptor (EGFR), Retinoid X Receptor (RXR) and the like.

[0019] In another aspect, the invention relates to pharmaceutical compositions containing the novel compounds of the invention and to methods of using these compounds to modulate selective gene expression by one or more cellular receptors.

[0020] In another aspect, the invention relates to pharmaceutical compositions containing the novel compounds of the invention and to methods of treating diseases and/or conditions using the same. Examples of such disorders include proliferative disorders, differentiation disorders, cancer, inflammatory diseases, cardiovascular diseases, plasma HDL levels, apolipoprotein A1 metabolism, hyperlipidemia, lipid metabolism, lipid homeostasis, hyperlipidemia, skin-related processes, autoimmune diseases, fatty acid metabolism, malignant cell development, premalignant lesions, programmed cell death, endocrinological processes, AP-1 metabolism and the like.

[0021] In another aspect, the invention relates to pharmaceutical compositions containing the novel compounds of the invention and to methods of treating diseases and/or conditions using the same. Example of diseases and/or conditions include cancer,

[0022] In yet another aspect, the invention relates to pharmaceutical compositions containing the novel compounds of the invention in combination with other therapeutic agents and to methods of treating diseases and/or conditions using the same. Example of diseases and/or conditions include cancer, mammary cancer, prostate cancer, kidney cancer, Karposi's sarcoma, colon cancer, cervical cancer, lung cancer, cutaneous T-cell lymphoma, cancer of the head and neck, cancers of the aerodigestive pathway, skin cancer, bladder cancer, sarcomas, leukoplakias, acute promyelocytic leukemia and the like. Examples of other therapeutic agents include Busulfan, Carboplatin, Cisplatin, Cyclophosphamide, Cytosine arabinoside, Etoposide, 5-Fluorouracil, Melphalan, Methotrexate, Mitoxantrone, Taxol, Interferon, Fareston, Arzoxifene, Evista, Tamoxifen, and the like.

[0023] The invention further provides pharmaceutical compositions containing one or more of the novel compounds as well as pharmaceutically acceptable pro-drugs and salts of such compounds.

[0024] Additional objects, advantages and novel features of the invention will be set forth in part in the detailed description which follows, and in part will become apparent to those skilled in the art upon examination of the following, or may be learned by practice of the invention.
DETAILED DESCRIPTION OF THE INVENTION

[0025] In one embodiment of the invention, there are provided compounds having the structural formula \( A \):

\[
\begin{array}{c}
\text{R}_1 - \text{R}_2 - \text{R}_3 \\
\text{R}_4 - \text{R}_5
\end{array}
\]

wherein:

a. \( R_1 \) is selected from the group consisting of structural formulae \( A_1, A_2, A_3, A_4, A_5, \) and \( A_6 \)

\[
\begin{array}{c}
A_1 \\
A_2 \\
A_3
\end{array}
\]

with:

i) \( Z \) is selected from the group consisting of \( \text{CH} \), and nitrogen

ii) \( Y_3 \) is selected from the group consisting of \( C_{2-5} \) alkyl, and \( C_{2-5} \) substituted alkyl

iii) \( R_6 \) is selected from the group consisting of -OH, alkylxy, aryloxy, alkylcarboxy, arylcarboxy, -SH, alkylthio, arylthio, -NH_2, alkylamino, arylamino, N-aryl-N-
alkylamino, -NHNH₂, alkylhydrazino, aryldiazino, N-aryl-N-alkylhydrazino, -
NHOR₁₇, -O(P=O)(OR₁₇)(OR₁₈), -OC₇H₅O(P=O)(OR₁₇)(OR₁₈), and -OSO₃R₁₇
iv) R₁ is selected from the group consisting of hydrogen, halogen, and alkyl,
v) R₁₅ and R₁₆ are independently selected from the group consisting of -OH, alkoxy,
aryloxy, -NH₂, alkylamino, arylamino, N-aryl-N-alkylamino, -NHNH₂, alkylhydrazino,
aryldiazino, N-aryl-N-alkylhydrazino, -NHOR₁₇, alkyl, and aryl
vi) R₁₇ and R₁₈ are independently selected from the group consisting of hydrogen,
alcohol, and aryl
vii) ** represents the point of attachment of the R₁ to the molecule of formula A;

b. R₂ is selected from the group consisting of

\[
\begin{align*}
\text{H} & \quad \text{C} & \quad \text{C} \\
\text{O} & \quad \text{C} & \quad \text{N} & \quad \text{R₇} & \quad \text{R₈} & \quad \text{R₉} & \quad \text{Y₁} & \quad \text{Y₂} \\
\text{R₁₇} & \quad \text{R₁₈} & \quad \text{R₁₉} & \quad \text{R₁₀} & \quad \text{R₁₁} & \quad \text{R₁₂} & \quad \text{CH₂₇} & \quad \text{H}
\end{align*}
\]

wherein:

i) R₈, R₉, R₁₀ and R₁₁ are independently selected from the group consisting of hydrogen, halogen and alkyl,

ii) Y₁ and Y₂ are independently O, S, NH, or CH₂, or Y₁ is O, S or NH, and Y₂ is CH₂, with the proviso that Y₁ and Y₂ cannot both be O, S, or NH if n is 0 or 1, and

iii) * represents the point of attachment of the R₂ to the molecule of formula A

c. R₃ substituents are independently selected from the group consisting of alkyl, alkoxy, and halogen,

d. R₄ is selected from the group consisting of alkyl, aryl, heteroaryl, and adamantyl; R₅ is selected from the group consisting of alkyl, alkoxy, alkylthio, aryl, and heteroaryl; or R₄ and R₅ may be linked together to form a substituted or unsubstituted 5- or 6-membered cycloalkyl or cycloalkenyl ring, where said substituents are selected from the group consisting of -OH, =O, halogen, alkyl, and where 1 or 2 of the carbon atoms on said 5- or 6-membered cycloalkyl or cycloalkenyl ring may be optionally replaced by W where W is selected from the group consisting of O, S, N, NH, alkylamino, and arylamino;
e. m and n are independently 0, 1, 2 or 3, and pharmaceutically acceptable salts thereof.

[0026] In another embodiment of the invention, there are provided compounds having the structure, selected from the group consisting of compounds having formulae \( B_1 \), \( B_2 \), \( B_3 \), \( B_4 \), \( B_5 \), \( B_6 \), \( B_7 \), \( B_8 \), \( B_9 \), and \( B_{10} \)

\[
\begin{align*}
\text{[Diagram: Structures of molecules]} \nonumber
\end{align*}
\]

wherein \( R_1 \), \( R_2 \) and \( R_3 \) are as described above and \( R_{13} \) is selected from the group consisting of O, S, \((\text{CH}_3)_2\text{C}\) and \(\text{CH}_2\), and \( R_{14} \) is hydrogen or methyl.

[0027] The compounds according to this invention may contain one or more asymmetric carbon atoms and can thus occur as racemates and racemic mixtures, single enantiomers, diastereomeric mixtures or individual diastereomers. The term "stereoisomer" refers to a chemical compound having the same molecular weight, chemical composition, and constitution as another, but with the atoms grouped differently. That is, certain identical chemical moieties are at different orientations in space and, therefore, when pure, have the ability to rotate the plane of polarized light. However, some pure stereoisomers may have an
optical rotation that is so slight that it is undetectable with present instrumentation. The compounds described herein may have one or more asymmetrical carbon atoms and therefore include various stereoisomers. All such isomeric forms of these compounds are expressly included in the present invention.

[0028] Each stereogenic carbon may be of R or S configuration. Although the specific compounds exemplified in this application may be depicted in a particular configuration, compounds having either the opposite stereochemistry at any given chiral center or mixtures thereof are also envisioned. When chiral centers are found in the derivatives of this invention, it is to be understood that this invention encompasses all possible stereoisomers.

[0029] The terms "optically pure compound" or "optically pure isomer" refers to a single stereoisomer of a chiral compound regardless of the configuration of the said compound.

[0030] For purpose of this application, all sugars are referenced using conventional three-letter nomenclature. All sugars are assumed to be in the D-form unless otherwise noted, except for fucose, which is in the L-form. Further, all sugars are in the pyranose form.

[0031] The compounds according to this invention may occur as a mixture of tautomers. The term "tautomer" or "tautomerism" refer to one of two or more structural isomers that exist in equilibrium and are readily converted from one isomeric form to another. Examples of include keto-enol tautomers, such as acetone/propen-2-ol and the like, ring-chain tautomers, such as glucose/ 2,3,4,5,6-pentahydroxy-hexanal and the like. The compounds described herein may have one or more tautomers and therefore include various isomers. All such isomeric forms of these compounds are expressly included in the present invention. The following example of tautomerism is provided for reference:
The following example of nomenclature and numbering system is provided for reference.

3-Hydroxy-5,5-dimethyl-2-[4-(3,5,5,8,8-pentamethyl-5,6,7,8-tetrahydronaphthalene-2-carbonyl)-phenyl]-cyclohex-2-enone

The term "substantially homogeneous" refers to collections of molecules wherein at least 80%, preferably at least about 90% and more preferably at least about 95% of the molecules are a single compound or a single stereoisomer thereof.

As used herein, the term “attached” signifies a stable covalent bond, certain preferred points of attachment being apparent to those skilled in the art.

The terms "optional" or "optionally" refer to occurrence or non-occurrence of the subsequently described event or circumstance, and that the description includes instances where said event or circumstance occurs and instances where it does not. In such context, the sentence "optionally substituted alkyl group" means that the alkyl group may or may not be substituted and the description includes both a substituted and an unsubstituted alkyl group.

The term "effective amount" of a compound refers a non-toxic but sufficient amount of the compound that provides a desired effect. This amount may vary from subject to subject, depending on the species, age, and physical condition of the subject, the severity of the disease that is being treated, the particular compound used, its mode of administration, and the like. Therefore, it is difficult to generalize an exact "effective amount", yet, a suitable effective amount may be determined by one of ordinary skill in the art.
[0037] The term "pharmaceutically acceptable" refers to a compound, additive or composition that is not biologically or otherwise undesirable. For example, the additive or composition may be administered to a subject along with a compound of the invention without causing any undesirable biological effects or interacting in an undesirable manner with any of the other components of the pharmaceutical composition in which it is contained.

[0038] The term "pharmaceutically acceptable salts" includes hydrochloric salt, hydrobromic salt, hydroiodic salt, hydrofluoric salt, sulfuric salt, citric salt, maleic salt, acetic salt, lactic salt, nicotinic salt, succinic salt, oxalic salt, phosphoric salt, malonic salt, salicylic salt, phenylacetic salt, stearic salt, pyridine salt, ammonium salt, piperazine salt, diethylamine salt, nicotinamide salt, fomic salt, urea salt, sodium salt, potassium salt, calcium salt, magnesium salt, zinc salt, lithium salt, cinnamic salt, methylamino salt, methanesulfonic salt, picric salt, tartaric salt, triethylamino salt, dimethy lamino salt, tris(hydroxymethyl)aminomethane salt and the like. Additional pharmaceutically acceptable salts are known to those of skill in the art.

[0039] When used in conjunction with a compound of this invention, the terms "elicit", "eliciting," modulator", "modulate", "modulating", "regulator", "regulate" or "regulating" selective gene expression refer to a compound that can act as an activator, an agonist, a pan-agonist or an antagonist of gene expression by a particular receptor, such as for example a Retinoid X Receptor and the like.

[0040] The terms "therapeutic agent" and "chemotherapeutic agent", refer to a compound or compounds and pharmaceutically acceptable compositions thereof that are administered to mammalian subjects as prophylactic or remedy in the treatment of a disease or medical condition. Such compounds may be administered to the subject via oral formulation, transdermal formulation or by injection.

[0041] The term "Lewis acid" refers to a molecule that can accept an unshared pair of electrons and as such would be obvious to one of ordinary skill and knowledge in the art. The definition of "Lewis acid" includes but is not limited to: boron trifluoride, boron trifluoride etherate, boron trifluoride tetrahydrofuran complex, boron trifluoride tert-butyl-methyl ether complex, boron trifluoride dibutyl ether complex, boron trifluoride dihydrate, boron trifluoride di-acetic acid complex, boron trifluoride dimethyl sulfide complex, boron trichloride, boron

[0042] The term "acylating agent" refers to a molecule that can transfer an alkylcarbonyl, substituted alkylcarbonyl or aryl carbonyl group to another molecule. The definition of "acylating agent" includes but is not limited to ethyl acetate, vinyl acetate, vinyl propionate, vinyl butyrate, isopropenyl acetate, 1-ethoxyvinyl acetate, trichloroethyl butyrate, trifluoroethyl butyrate, trifluoroethyl laurate, S-ethyl thiooctanoate, diacetyl monoxime acetate, acetic anhydride, acetyl chloride, succinic anhydride, diketene, diallyl carbonate, carbonic acid but-3-enyl ester cyanomethyl ester, amino acid and the like.
[0043] The term "nucleophile" or "nucleophilic reagent" refers to a negatively charged or neutral molecule that has an unshared pair of electrons and as such would be obvious to one of ordinary skill and knowledge in the art. The definition of "nucleophile" includes but is not limited to: water, alkylhydroxy, alkoxy anion, aryhydroxy, aryloxy anion, alkylthiol, alkylthio anion, arythiol, arythio anion, ammonia, alkylamine, arylamine, alkylamine anion, arylamine anion, hydrazine, alkyl hydrazine, arylhydrazine, alkylcarbonyl hydrazine, arylcarbonyl hydrazine, hydrazine anion, alkyl hydrazine anion, aryldrazine anion, alkylcarbonyl hydrazine anion, arylcarbonyl hydrazine anion, cyanide, azide, hydride, alkyl anion, aryl anion and the like.

[0044] The term "electrophile" or "electrophilic reagent" refers to a positively charged or neutral molecule that has an open valence shell and as such would be obvious to one of ordinary skill and knowledge in the art. The definition of "electrophile" includes but is not limited to: hydronium, acylum, lewis acids, such as for example, boron trifluoride and the like, halogens, such as for example Br₂ and the like, carbocations, such as for example tert-butyl cation and the like, diazomethane, trimethylsilyldiazomethane, alkyl halides, such as for example methyl iodide, benzyl bromide and the like, alkyl triflates, such as for example methyl triflate and the like, alkyl sulfonates, such as for example ethyl toluenesulfonate, butyl methanesulfonate and the like, acyl halides, such as for example acetyl chloride, benzyol bromide and the like, acid anhydrides, such as for example acetic anhydride, succinic anhydride, maleic anhydride and the like, isocyanates, such as for example methyl isocyanate, phenylisocyanate and the like, chloroformates, such as for example methyl chloroformate, ethyl chloroformate, benzyl chloroformate and the like, sulfonyl halides, such as for example methanesulfonyl chloride, p-toluenesulfonyl chloride and the like, silyl halides, such as for example trimethylsilyl chloride, tertbutyldimethyl silyl chloride and the like, phosphoryl halide such as for example dimethyl chlorophosphate and the like, alpha-beta-unsaturated carbonyl compounds such as for example acrolein, methyl vinyl ketone, cinnamaldehyde and the like.

[0045] The term "oxidant" refers to any reagent that will increase the oxidation state of a carbon atom in the starting material by either adding an oxygen atom to this carbon or removing an electron from this carbon and as such would be obvious to one of ordinary skill and knowledge in the art. The definition of "oxidant" includes but is not limited to: osmium
tetroxide, ruthenium tetroxide, ruthenium trichloride, potassium permanganate, meta-chloroperbenzoic acid, hydrogen peroxide, dimethyl dioxirane and the like.

[0046] The term "metal ligand" refers to a molecule that has an unshared pair of electrons and can coordinate to a metal atom and as such would be obvious to one of ordinary skill and knowledge in the art. The definition of "metal ligand" includes but is not limited to: water, alkoxy anion, alkylthio anion, ammonia, trialkylamine, triarylamine, trialkylphosphine, triarylphtophine, cyanide, azide and the like.

[0047] The term "reducing reagent" refers to any reagent that will decrease the oxidation state of a carbon atom in the starting material by either adding a hydrogen atom to this carbon or adding an electron to this carbon and as such would be obvious to one of ordinary skill and knowledge in the art. The definition of "reducing reagent" includes but is not limited to: borane-dimethyl sulfide complex, 9-borabicyclo[3.3.1]nonane (9-BBN), catechol borane, lithium borohydride, sodium borohydride, sodium borohydride-methanol complex, potassium borohydride, sodium hydroxyborohydride, lithium triethylborohydride, lithium n-butylborohydride, sodium cyanoborohydride, calcium (II) borohydride, lithium aluminum hydride, diisobutylaluminum hydride, n-butyl-diisobutylaluminum hydride, sodium bis-methoxyethoxyaluminum hydride, triethoxysilane, diethoxymethylsilane, lithium hydride, lithium, sodium, hydrogen Ni/B, and the like. Certain acidic and Lewis acidic reagents enhance the activity of reducing reagents. Examples of such acidic reagents include: acetic acid, methanesulfonic acid, hydrochloric acid, and the like. Examples of such Lewis acidic reagents include: trimethoxyborane, triethoxyborane, aluminum trichloride, lithium chloride, vanadium trichloride, dicyclopentadienyl titanium dichloride, cesium fluoride, potassium fluoride, zinc (II) chloride, zinc (II) bromide, zinc (II) iodide, and the like.

[0048] The term "coupling reagent" refers to any reagent that will activate the carbonyl of a carboxylic acid and facilitate the formation of an ester or amide bond. The definition of "coupling reagent" includes but is not limited to: acetyl chloride, ethyl chloroformate, dicyclohexylcarbodiimide (DCC), disopropyl carbodiimide (DIC), 1-ethyl-3-(3-dimethylaminopropyl) carbodiimide (EDCI), N-hydroxybenzotriazole (HOBt), N-hydroxysuccinimide (HOSu), 4-nitrophenol, pentfluorophenol, 2-(1H-benzotriazole-1-yl)-1,1,3,3-tetramethyluronium tetrafluoroborate (TBTU), O-benzotriazole-N,N,N',N'-tetramethyluronium hexafluorophosphate (HBTU), benzotriazole-1-yl-oxy-tris-
(dimethylamino)-phosphonium hexafluorophosphate (BOP), benzotriazole-1-yl-oxy-tris-pyrrolidinophosphonium hexafluorophosphate, bromo-trispyrrolidino- phosphonium hexafluorophosphate, 2-(5-norbornene-2,3-dicarboximido)-1,1,3,3-tetramethyluronium tetrafluoroborate (TNTU), O-(N-succinimidyl)-1,1,3,3-tetramethyluronium tetrafluoroborate (TSTU), tetramethylfluoroformamidinium hexafluorophosphate and the like.

[0049] The term "removable protecting group" or "protecting group" refers to any group which when bound to a functionality, such as the oxygen atom of a hydroxyl or carboxyl group or the nitrogen atom of an amino group, prevents reactions from occurring at these functional groups and which protecting group can be removed by conventional chemical or enzymatic steps to reestablish the functional group. The particular removable protecting group employed is not critical.

[0050] The definition of "hydroxy protecting group" includes but is not limited to:

a) Methyl, tert-butyl, allyl, propargyl, p-chlorophenyl, p-methoxyphenyl, p-nitrophenyl, 2,4-dinitrophenyl, 2,3,5,6-tetrafluoro-4-(trifluoromethyl)phenyl, methoxymethyl, methylthiomethyl, (phenyldimethylsilyl)methoxymethyl, benzylxoxymethyl, p-methoxybenzoxymethyl, p-nitrobenzoxymethyl, o-nitrobenzoyloxymethyl, (4-methoxyethoxy)methyl, guaiacolmethyl, tert-butoxymethyl, 4-pentenyloxymethyl, tert-butyl(dimethyl)silyloxymethyl, thexyldimethyloxysiloxymethyl, tert-butylphenyloxysiloxymethyl, 2-methoxyethoxymethyl, 2,2,2-trichloroethoxymethyl, bis(2-chloroethoxymethyl, 2-(trimethylsilyl)ethoxymethyl, menthoxymethyl, 1-ethoxyethyl, 1-(2-chloroethoxy)ethyl, 1-(2-ethoxyethyl)ethyl, 1-methyl-1-benzylxoxymethyl, 1-ethyl-1-benzylxoxymethyl, 1-ethyl-1-benzoxo-2-fluoroxymethyl, 1-ethyl-1-phenoxyethyl, 2,2,2-trichloroethyl, 1-dianisyl-2,2,2-trichloroethyl, 1,1,1,3,3,3-hexafluoro-2-phenylisopropyl, 2-trimethylsilylpropan-2-yl, (benzylthio)ethyl, 2-(phenylselenyl)ethyl, tetrahydropranyl, 3-bromotetrahydropranyl, tetrahydrothiopyranyl, 1-methoxycyclohexyl, 4-methoxytetrahydropranyl, 4-methoxytetrahydrothiopyranyl, 4-methoxytetrahydropranyl, 4-methoxytetrahydrothiopyranyl S,S-dioxide, 1-[(2-chloro-4-methyl)phenyl]-4-methoxypiperidin-4-yl, 1-(2-fluorophenyl)-4-methoxypiperidin-4-yl, 1,4-dioxan-2-yl, tetrahydrofuranyl, tetrahydrothiophuranyl and the like;

b) Benzyl, 2-nitrobenzyl, 2-trifluoromethylbenzyl, 4-methoxybenzyl, 4-nitrobenzyl, 4-chlorobenzyl, 4-bromobenzyl, 4-cyanobenzyl, 4-phenylbenzyl, 4-acylanobenzyl, 4-azidobenzyl, 4-(methylsulfinyl)benzyl, 2,4-dimethoxybenzyl, 4-azido-3-chlorobenzyl, 3,4-dimethoxybenzyl, 2,6-dichlorobenzyl, 2,6-difluorobenzyl, 1-pyrenylmethyl,
diphenylmethyl, 4,4'-dinitrobenzhydryl, 5-benzosuberyl, triphenylmethyl (Trityl), α-
naphthylidiphenylmethyl, (4-Methoxyphenyl)-diphenylmethyl, di-(p-methoxyphenyl)-
phenylmethyl, tri-(p-methoxyphenyl)methyl, 4-(4'-bromophenacylxyloxy)-phenyldiphenylmethyl,
4,4',4''-tris(4,5-dichlorophthalimidophenyl)methyl, 4,4',4''-tris(levulinylxoyphenyl)methyl,
4,4'-dimethoxy-3''-[N-(imidazolylmethyl)]trityl, 4,4'-dimethoxy-3''-[N-
(imidazolylethyle]carbamoyl]trityl, 1,1-bis(4-methoxyphenyl)-1'-pyrenylmethyl, 4-(17-
tetrazeno[a,c,g,l]fluorenyl)methyl)-4,4'-dimethoxytrityl, 9-anthryl, 9-(9-phenyl)xanthenyl, 9-
(9-phenyl-10-oxo)anthryl and the like;
c) Trimethylsilyl, triethylsilyl, triisopropylsilyl, dimethylisopropylsilyl,
diethylisopropylsilyl, dimethylhexylsilyl, tert-butylidimethylsilyl, tert-butylidiphenylsilyl,
tribenzylsilyl, tri-p-xylisilyl, triphenylsilyl, diphenylmethylsilyl, di-tert-butylmethylsilyl,
tris(trimethylsilyl)silyl, (2-hydroxystyryl)dimethylsilyl, (2-hydroxystyryl)diisopropylsilyl, tert-
butylmethoxyphenylsilyl, tert-butoxydimethylsilyl and the like;
d) -C(O)R₂₀, where R₂₀ is selected from alkyl, substituted alkyl, aryl and more
specifically R₂₀ = hydrogen, methyl, ethyl, tert-butyl, adamantyl, crotyl, chloromethyl,
dichloromethyl, trichloromethyl, trifluoromethyl, methoxymethyl, triphenylmethoxymethyl,
phenoxyethyl, 4-chlorophenoxyethyl, phenylmethyl, diphenylmethyl, 4-methoxycrotly, 3-
phenylpropyl, 4-pentenyl, 4-octenyl, 4,4-(ethylene)dithio)pentyl, 5-[3-bis(4-
methoxyphenyl)hydroxymethyl]phenoxy]-4-octenyl, phenyl, 4-methyphenyl, 4-nitrophenyl,
4-fluorophenyl, 4-chlorophenyl, 4-methoxyphenyl, 4-phenylphenyl, 2,4,6-trimethylphenyl, α-
naphthyl, benzoyl and the like;
e) -C(O)OR₂₀, where R₂₀ is selected from alkyl, substituted alkyl, aryl and more
specifically R₂₀ = methyl, methoxymethyl, 9-fluorenylethyl, ethyl, 2,2,2-trichloromethyl, 1,1-
dimethyl-2,2,2-trichloroethyl, 2-(trimethylsilyl)ethyl, 2-(phenylsulfonyl)ethyl, isobutyl, tert-
Butyl, vinyl, allyl, 4-nitrophenyl, benzyl, 2-nitrobenzyl, 4-nitrobenzyl, 4-methoxybenzyl, 2,4-
dimethoxybenzyl, 3,4-dimethoxybenzyl, 2-(methylthiomethoxy)ethyl, 2-dansylethyl, 2-(4-
nitrophenyl)ethyl, 2-(2,4-dinitrophenyl)ethyl, 2-cyano-1-phenylethyl, thiobenzyl, 4-ethoxy-1-
naphthyl and the like.

[0051] The definition of "amino protecting group" includes but is not limited to:

a) 2-methylthioethyl, 2-methyisulfonyl, 2-(p-toluenesulfonylethyl, [2-(1,3-
dithianyl)]methyl, 4-methylthiophenyl, 2,4-dimethylthiophenyl, 2-phosphonioethyl, 1-methyl-
1-(triphenylphosphonian)ethyl, 1,1-dimethyl-2-cyanoethyl, 2-dansylethyl, 2-(4-
nitrophenyl)ethyl, 4-phenylacetoxbenzyl, 4-azidobenzyl, 4-azidomethoxybenzyl, m-chloro-p-
acyloxybenzyl, p-(dihydroxyboryl)benzyl, 5-benzisoxazolylmethyl, 2-(trifluoromethyl)-6-chromonylmethyl, m-nitrophenyl, 3.5-dimethoxybenzyl, 1-methyl-1-(3,5-dimethoxyphenyl)ethyl, o-nitrobenzyl, α-methylnitropiperonyl, 3,4-dimethoxy-6-nitrobenzyl, N-benzenesulfenyl, N-o-nitrobenzenesulfenyl, N-2,4-dinitrobenzenesulfenyl, N-pentachlorobenzenesulfenyl, N-2-nitro-4-methoxybenzenesulfenyl, N-triphenylmethyIsulfenyl, N-1-(2,2,2-trifluoro-1,1-diphenylethyl)sulfenyl, N-3-nitro-2-pyridinesulfenyl, N-p-toluenesulfenyl, N-benzenesulfenyl, N-2,3,6-trimethyl-4-methoxybenzenesulfenyl, N-2,4,6-trimethoxybenzene-sulfenyl, N-2,6-dimethyl-4-methoxybenzenesulfenyl, N-pentamethylbenzenesulfenyl, N-2,3,5,6-tetramethyl-4-methoxybenzenesulfenyl and the like;

\[ -\text{C(O)}\text{OR}_{20}, \] 
where \( R_{20} \) is selected from alkyl, substituted alkyl, aryl and more specifically \( R_{20} = \text{methyl, ethyl, 9-fluorenylmethyl, 9-(2-sulfo)fluorenylmethyl, 9-(2,7-dibromo)fluorenylmethyl, 17-tetrabeno[a,c,g,i]fluorenylmethyl, 2-chloro-3-indenylmethyl, benz[flinden-3-ylmethyl, 2,7-di-t-butyl-[9-(10,10-dioxo-10,10-tetrahydrothioxanthyl)]methyl, 1,1-dioxobenso[b]thiophene-2-ylmethyl, 2,2,2-trichloroethyl, 2-trimethylsilylethyl, 2-phenylethyl, 1-(1-adamantyl)-1-methylethyl, 2-chloroethyl, 1,1-dimethyl-2-haloethyl, 1,1-dimethyl-2,2-dibromoethyl, 1,1-dimethyl-2,2,2-trichloroethyl, 1-methyl-1-(4-biphenylethyl), 1-(3,5-di-t-butylphenyl)-1-methylethyl, 2-(2-pyridyl)ethyl, 2-(4'-pyridyl)ethyl, 2,2-bis(4'-nitrophenyl)ethyl, N-(2-pivaloylamino)-1,1-dimethylethyl, 2-[[2-nitrophenyl]dithio]-1-phenylethyl, tert-butyl, 1-adamantyl, 2-adamantyl, Vinyl, allyl, 1-isopropylallyl, cinnamyl, 4-nitrocinnamyl, 3-(3'-pyridyl)prop-2-enyl, 8-quinoxyln, N-Hydroxyxypiperidinyl, alkylidthio, benzyl, p-methoxybenzyl, p-nitrobenzyl, p-bromobenzyl, p-chlorobenzyl, 2,4-dichlorobenzyl, 4-methylsulfanylbenzyl, 9-anthrylmethyl, diphenylmethyl, tert-amyl, S-benzyl thiocarbamate, butynyl, p-cyanobenzyl, cyclobutyl, cyclohexyl, cyclopentyl, cyclopropylmethyl, p-decyluxenzy, diisopropylmethyl, 2,2-dimethoxycarbonylvinyl, o-(N,N'-dimethylcarboxamido)benzyl, 1,1-dimethyl-3-(N,N'-dimethylcarboxamido)propyl, 1,1-dimethylpropynyl, di(2-pyridyl)methyl, 2-furanylethyl, 2-lodoethyl, isobornyl, isobutyl, isonicotinyl, p-(p'-methoxyphenyloazolobenzyl, 1-methylcyclobutyl, 1-methylcyclohexyl, 1-methyl-1-cyclopropylmethyl, 1-methyl-1-(p-phenylazophenyl)ethyl, 1-methyl-1-phenylethyl, 1-methyl-1,4'-pyridylethyl, phenyl, p-(phenylazo)benzyl, 2,4,6-tri-methylphenyl, 4-(trimethylummonium)benzyl, 2,4,6-trimethylbenzyl and the like.
The definition of "carboxyl protecting group" includes but is not limited to:

- 2-N-(morpholino)ethyl, choline, methyl, methoxyethyl, 9-Fluorenylmethyl,
  methoxyethyl, methylthiomethyl, tetrahydropyranyl, tetrahydrofurany1,
  methoxyethoxymethyl, 2-(trimethylsilyl)ethoxymethyl, benzyloxymethyl, pivaloyloxymethyl,
  phenylacetoxymethyl, triisopropylsilylmethyl, cyanomethyl, acetol, p-bromophenacyl, α-
  methylphenacyl, p-methoxyphenacyl, desyl, carboxamidomethyl, p-
  azobenzene-carboxamido-methyl, N-phthalimidomethyl, (methoxyethoxy)ethyl, 2,2,2-
  trichloroethyl, 2-fluoroethyl, 2-chloroethyl, 2-bromoethyl, 2-iodoethyl, 4-chlorobutyl, 5-
  chloropentyl, 2-(trimethylsilyl)ethyl, 2-methylthioethyl, 1,3-dithianyl-2-methyl, 2-(p-
  nitrophenylsulfenyl)ethyl, 2-(p-toluenesulfonyl)ethyl, 2-(2-pyridyl)ethyl, 2-(p-
  methoxyphenyl)ethyl, 2-(diphenylphosphino)ethyl, 1-methyl-1-phenylethyl, 2-(4-acetyl-2-
  nitrophenyl)ethyl, 2-cyanoethyl, heptyl, tert-butyl, 3-methyl-3-pentyl, dicyclopentylmethyl,
  2,4-dimethyl-3-pentyl, cyclopentyl, cyclohexyl, allyl, methallyl, 2-methylbut-3-en-2-yl, 3-
  methylbut-2-(3-enyl), 3-buten-1-yl, 4-(trimethylsilyl)-2-buten-1-yl, cinnamyl, α-
  methylcinnamyl, propargyl, phenyl, 2,6-dimethylphenyl, 2,6-diisopropylphenyl, 2,6-di-tert-
  butyl-4-methylphenyl, 2,6-di-tert-butyl-4-methoxyphenyl, p-(methylthio)phenyl,
  pentafluorophenyl, benzyl, triphenylmethyl, diphenylmethyl, bis(o-nitrophenyl)methyl, 9-
  anthrylmethyl, 2-(9,10-dioxoanthrylmethyl, 5-dibenzosubereryl, 1-pyrenylmethyl, 2-
  (trifluoromethyl)-6-chromonylmethyl, 2,4,6-trimethylbenzyl, p-bromobenzyl, α-nitrobenzyl, p-
  nitrobenzyl, p-methoxybenzyl, 2,6-dimethoxybenzyl, 4-(methylsulfanyl)benzyl, 4-Sulfo-
  benzyl, 4-azidomethoxybenzyl, 4-{a-[1-(4,4-dimethyl-2,6-dioxocyclohexylidene)-3-
  methylbutyl]amino}benzyl, piperonyl, 4-picoyl, trimethylsilyl, triethylsilyl, tert-
  butyldimethylsilyl, isopropylidemethylsilyl, phenylidemethylsilyl, di-tert-butylmethylsilyl,
  triisopropylsilyl and the like.

The term "Amino acid" refers to any of the naturally occurring amino acids, as
well as synthetic analogs and derivatives thereof. Alpha-Amino acids comprise a carbon
atom to which is bonded an amino group, a carboxy group, a hydrogen atom, and a
distinctive group referred to as a "side chain". The side chains of naturally occurring amino
acids are well known in the art and include, for example, hydrogen (e.g., as in glycine), alkyl
(e.g., as in alanine, valine, leucine, isoleucine, proline), substituted alkyl (e.g., as in
threonine, serine, methionine, cysteine, aspartic acid, asparagine, glutamic acid, glutamine,
arginine, and lysine), arylalkyl (e.g., as in phenylalanine), substituted arylalkyl (e.g., as in tyrosine), heteroarylalkyl (e.g., as in tryptophan, histidine) and the like. One of skill in the art will appreciate that the term "amino acid" can also include beta-, gamma-, delta-, omega-amino acids, and the like. Unnatural amino acids are also known in the art, as set forth in, Natchus, M. G. Organic Synthesis: Theory and Applications (2001), 5, 89-196; Ager, D. J. Current Opinion in Drug Discovery & Development (2001), 4(6), 800; Reginato, G. Recent Research Developments in Organic Chemistry (2000), 4(Pt. 1), 351-359; Dougherty, D. A. Current Opinion in Chemical Biology (2000), 4(6), 645-652; Lesley, S. A. Drugs and the Pharmaceutical Sciences (2000), 101(Peptide and Protein Drug Analysis), 191-205; Pojiškov, A. E. Journal of Molecular Catalysis B: Enzymatic (2000), 10(1-3), 47-55; Ager, D. J. Speciality Chemicals (1999), 19(1), 10-12, and all references cited therein. Stereoisomers (e.g., D-amino acids) of the twenty conventional amino acids, unnatural amino acids such as alpha, alpha-disubstituted amino acids and other unconventional amino acids may also be suitable components for compounds of the present invention. Examples of unconventional amino acids include: 4-hydroxyproline, 3-methylhistidine, 5-hydroxylysine, and other similar amino acids and imino acids (e.g., 4-hydroxyproline).

[0054] The term "N-protected amino acid" refers to any amino acid which has a protecting group bound to the nitrogen of the amino functionality. This protecting group prevents reactions from occurring at the amino functional group and can be removed by conventional chemical or enzymatic steps to reestablish the amino functional group. The particular protecting group employed is not critical.

[0055] The term "O-protected amino acid" refers to any amino acid which has a protecting group bound to the oxygen of the carboxyl functionality. This protecting group prevents reactions from occurring at the carboxyl functional group and can be removed by conventional chemical or enzymatic steps to reestablish the carboxyl functional group. The particular protecting group employed is not critical.

[0056] The term "Prodrug" refers to an agent that is converted into the parent drug in vivo. Prodrugs are often useful because, in some situations, they may be easier to administer than the parent drug. They may, for instance, be bioavailable by oral administration whereas the parent drug is not. The prodrug may also have improved solubility in pharmaceutical compositions over the parent drug. A prodrug may be converted

[0057] The terms "halogen", "halide" or "halo" include fluorine, chlorine, bromine, and iodine.

[0058] The terms "alkyl" and "substituted alkyl" are interchangeable and include substituted and unsubstituted C₁-C₁₀ straight chain saturated aliphatic hydrocarbon groups, substituted and unsubstituted C₂-C₁₀ straight chain unsaturated aliphatic hydrocarbon groups, substituted and unsubstituted C₄-C₁₀ branched saturated aliphatic hydrocarbon groups, substituted and unsubstituted C₄-C₁₀ branched unsaturated aliphatic hydrocarbon groups, substituted and unsubstituted C₃-C₈ cyclic saturated aliphatic hydrocarbon groups, substituted and unsubstituted C₅-C₈ cyclic unsaturated aliphatic hydrocarbon groups having the specified number of carbon atoms. For example, the definition of "alkyl" shall include but is not limited to: methyl (Me), ethyl (Et), propyl (Pr), butyl (Bu), pentyl, hexyl, heptyl, octyl, nonyl, decyl, undecyl, ethenyl, propenyl, butenyl, pentenyl, hexenyl, heptenyl, octenyl, nonenyl, decenyl, undecenyl, isopropyl (i-Pr), isobutyl (i-Bu), tert-butyl (t-Bu), sec-butyl (s-Bu), isopentyl, neopentyl, cyclopentyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl, cyclooctyl, cyclopentenyl, cyclohexenyl, cycloheptenyl, cyclooctenyl, methylcyclopentyl, ethylcyclohexenyl, butylcyclopentyl, adamantyl, norbornyl and the like. Alkyl substituents are independently selected from the group consisting of halogen, -OH, -SH, -NH₂, -CN, -NO₂, trihalomethyl, carbamoyl, aryloxyC₉ alkyl, heteroaryloxyC₁₀ alkyl, C₁₀ alkylxy, aryloxyC₁₀ alkyl, C₁₀ alkylthio, aryloxyC₁₀ alkylthio, C₁₀ alkylamino, aryloxyC₁₀ alkylamino, N-aryl-N-C₁₀.
10-alkylamino, C_{1-10}alkylcarboxyl, arylC_{0-10}alkylcarbonyl, C_{1-10}alkylcarboxy, arylC_{0-
10}alkylcarboxy, C_{1-10}alkylcarboxamido, arylC_{0-10}alkylcarboxamido, tetrahydrofuranyl,
morpholinyli, piperazinyl, hydroxypronyl, –C_{0-10}alkylCOOR_{21} and –C_{0-10}alkylCONR_{22}R_{23}
wherein R_{21}, R_{22} and R_{23} are independently selected from hydrogen, alkyl, arylC_{0-10}alkyl,
or R_{22} and R_{23} are taken together with the nitrogen to which they are attached forming a
saturated cyclic or unsaturated cyclic system containing 3 to 8 carbon atoms with at least
one substituent as defined herein.

[0059] The term "alkyloxy" (e.g. methoxy, ethoxy, propyloxy, allyloxy, cyclohexyloxy)
represents a substituted or unsubstituted alkyl group as defined above having the indicated
number of carbon atoms attached through an oxygen bridge. The term "alkyloxyalkyl"
represents an alkyloxy group attached through an alkyl or substituted alkyl group as defined
above having the indicated number of carbon atoms.

[0060] The term "alkythio" (e.g. methylthio, ethylthio, propylthio, cyclohexenylthio
and the like) represents a substituted or unsubstituted alkyl group as defined above having
the indicated number of carbon atoms attached through a sulfur bridge. The term
"alkythioalkyl" represents an alkythio group attached through an alkyl or substituted alkyl
group as defined above having the indicated number of carbon atoms.

[0061] The term "alkylamino" (e.g. methylamino, diethylamino, butylamino, N-propyl-
N-hexylamino, (2-cyclopentyl)propylamino, hexylamino, and the like) represents one or
two substituted or unsubstituted alkyl groups as defined above having the indicated number
of carbon atoms attached through an amine bridge. The substituted or unsubstituted alkyl
groups maybe taken together with the nitrogen to which they are attached forming a
saturated cyclic or unsaturated cyclic system containing 3 to 10 carbon atoms with at least
one substituent as defined above. The term "alkylaminoalkyl" represents an alkylamino
group attached through a substituted or unsubstituted alkyl group as defined above having
the indicated number of carbon atoms.

[0062] The term "alkylhydrazino" (e.g. methylhydrazino, diethylhydrazino,
butyhydrazino, (2-cyclopentyl)propylhydrazino, cyclohexanehydrazino, and the like)
represents one or two substituted or unsubstituted alkyl groups as defined above having the
indicated number of carbon atoms attached through a nitrogen atom of a hydrazine bridge.
The substituted or unsubstituted alkyl groups may be taken together with the nitrogen to which they are attached forming a saturated cyclic or unsaturated cyclic system containing 3 to 10 carbon atoms with at least one substituent as defined above. The term "alkylhydrozinoalkyl" represents an alkylhydrazino group attached through a substituted or unsubstituted alkyl group as defined above having the indicated number of carbon atoms.

[0063] The term "alkylcarbonyl" (e.g. cyclooctylcarbonyl, pentylcarbonyl, 3-hexenylcarbonyl and the like) represents a substituted or unsubstituted alkyl group as defined above having the indicated number of carbon atoms attached through a carbonyl group. The term "alkylcarbonylalkyl" represents an alkylcarbonyl group attached through a substituted or unsubstituted alkyl group as defined above having the indicated number of carbon atoms.

[0064] The term "alkylcarboxy" (e.g. heptylcarboxy, cyclopropylcarboxy, 3-pentenylcarboxy and the like) represents an alkylcarbonyl group as defined above wherein the carbonyl is in turn attached through an oxygen. The term "alkylcarboxyalkyl" represents an alkylcarboxy group attached through an alkyl group as defined above having the indicated number of carbon atoms.

[0065] The term "alkylcarbonylamino" (e.g. hexylcarbonylamino, cyclopentylcarbonyl-aminomethyl, methylcarbonylaminophenyl and the like) represents an alkylcarbonyl group as defined above wherein the carbonyl is in turn attached through the nitrogen atom of an amino group. The nitrogen group may itself be substituted with a substituted or unsubstituted alkyl or aryl group. The term "alkylcarbonylaminoalkyl" represents an alkylcarbonylamino group attached through a substituted or unsubstituted alkyl group as defined above having the indicated number of carbon atoms.

[0066] The term "alkylcarbonylhydrazino" (e.g. ethylcarbonylhydrazino, tert-butylcarbonylhydrazino and the like) represents an alkylcarbonyl group as defined above wherein the carbonyl is in turn attached through the nitrogen atom of a hydrazino group.

[0067] The term "aryl" represents an unsubstituted, mono-, di- or trisubstituted monocyclic, polycyclic, biaryl aromatic groups covalently attached at any ring position
capable of forming a stable covalent bond, certain preferred points of attachment being apparent to those skilled in the art (e.g., 3-phenyl, 4-naphtyl and the like). The aryl substituents are independently selected from the group consisting of halogen, -OH, -SH, -CN, -NO₂, trihalomethyl, hydroxypyronyl, C₁₋₁₀alkyl, arylC₀₋₁₀alkyl, C₀₋₁₀alkyloxyC₀₋₁₀alkyl, arylC₀₋₁₀alkyloxyC₀₋₁₀alkyl, C₀₋₁₀alkythioC₀₋₁₀alkyl, arylC₀₋₁₀alkythioC₀₋₁₀alkyl, C₀₋₁₀alkylaminoC₀₋₁₀alkyl, arylC₀₋₁₀alkylaminoC₀₋₁₀alkyl, N-aryl-N-C₀₋₁₀alkylaminoC₀₋₁₀alkyl, C₁₋₁₀alkylcarbonylC₀₋₁₀alkyl, arylC₀₋₁₀alkylcarbonylC₀₋₁₀alkyl, C₁₋₁₀alkyloxycarbonylC₀₋₁₀alkyl, arylC₀₋₁₀alkyloxycarbonylC₀₋₁₀alkyl, C₁₋₁₀alkylcarbamoylC₀₋₁₀alkyl, arylC₀₋₁₀alkylcarbamoylC₀₋₁₀alkyl, C₁₋₁₀alkylcarbonylaminoC₀₋₁₀alkyl, arylC₀₋₁₀alkylcarbonylaminoC₀₋₁₀alkyl, -C₀₋₁₀alkylCOOR₂₁, and -C₀₋₁₀alkylCONR₂₂R₂₃ wherein R₂₁, R₂₂ and R₂₃ are independently selected from hydrogen, C₁₋₁₀alkyl, arylC₀₋₁₀alkyl, arylC₀₋₁₀alkyl, or R₂₂ and R₂₃ are taken together with the nitrogen to which they are attached forming a saturated cyclic or unsaturated cyclic system containing 3 to 8 carbon atoms with at least one substituent as defined above.

[0068] The definition of "aryl" includes but is not limited to phenyl, biphenyl, naphthyl, dihydronaphthyl, tetrahydronaphthyl, indenyl, indanyl, azulenyl, anthryl, phenanthryl, fluorenyl, pyrenyl and the like.

[0069] The term "arylalkyl" (e.g. (4-hydroxyphenyl)ethyl, (2-aminonaphthyl)hexenyl and the like) represents an aryl group as defined above attached through a substituted or unsubstituted alkyl group as defined above having the indicated number of carbon atoms.

[0070] The term "arylcoboryl" (e.g. 2-thiophencarbonyl, 3-methoxynaphthylcarbonyl and the like) represents an aryl group as defined above attached through a carbonyl group.

[0071] The term "arylalkylcarbonyl" (e.g. (2,3-dimethoxyphenyl)propylcarbonyl, (2-chloronaphthyl)pentenyl-carbonyl and the like) represents an arylalkyl group as defined above wherein the alkyl group is in turn attached through a carbonyl.

[0072] The term "aryloxy" (e.g. phenoxy, naphthoxy, 3-methylphenoxy, and the like) represents an aryl or substituted aryl group as defined above having the indicated number of carbon atoms attached through an oxygen bridge. The term "aryloxyalkyl" represents an
aryloxy group attached through a substituted or unsubstituted alkyl group as defined above having the indicated number of carbon atoms.

[0073] The term "arylthio" (e.g. phenylthio, naphthylthio, 3-bromophenylthio, and the like) represents an aryl or substituted aryl group as defined above having the indicated number of carbon atoms attached through a sulfur bridge. The term "arylthioalkyl" represents an arylthio group attached through a substituted or unsubstituted alkyl group as defined above having the indicated number of carbon atoms.

[0074] The term "arylamino" (e.g. phenylamino, diphenylamino, naphthylamino, N-phenyl-N-naphthylamino, O-methylphenylamino, p-methoxyphenylamino, and the like) represents one or two aryl groups as defined above having the indicated number of carbon atoms attached through an amine bridge. The term "arylaminoalkyl" represents an arylamino group attached through a substituted or unsubstituted alkyl group as defined above having the indicated number of carbon atoms. The term "arylalkylamino" represents an aryl group attached through an alkylamino group as defined above having the indicated number of carbon atoms. The term "N-aryl-N-alkylamino" (e.g. N-phenyl-N-methylamino, N-naphthyl-N-butylamino, and the like) represents one aryl and one a substituted or unsubstituted alkyl group as defined above having the indicated number of carbon atoms independently attached through an amine bridge.

[0075] The term "arylhydrazino" (e.g. phenylhydrazino, naphthylhydrazino, 4-methoxyphenylhydrazino, and the like) represents one or two aryl groups as defined above having the indicated number of carbon atoms attached through a hydrazine bridge. The term "arylhydrazinoalkyl" represents an arylhydrazino group attached through a substituted or unsubstituted alkyl group as defined above having the indicated number of carbon atoms. The term "arylalkylhydrazino" represents an aryl group attached through an alkylhydrazino group as defined above having the indicated number of carbon atoms. The term "N-aryl-N-alkylhydrazino" (e.g. N-phenyl-N-methylhydrazino, N-naphthyl-N-butylhydrazino, and the like) represents one aryl and one a substituted or unsubstituted alkyl group as defined above having the indicated number of carbon atoms independently attached through an amine atom of a hydrazine bridge.
The term "arylcarboxy" (e.g. phenylcarboxy, naphthylcarboxy, 3-fluorophenylcarboxy and the like) represents an arylcarbonyl group as defined above wherein the carbonyl is in turn attached through an oxygen bridge. The term "arylcarboxyalkyl" represents an arylcarboxy group attached through a substituted or unsubstituted alkyl group as defined above having the indicated number of carbon atoms.

The term "arylcarbonylamino" (e.g. phenylcarbonylamino, naphthylcarbonylamino, 2-methylphenylcarbonylamino and the like) represents an arylcarbonyl group as defined above wherein the carbonyl is in turn attached through the nitrogen atom of an amino group. The nitrogen group may itself be substituted with an a substituted or unsubstituted alkyl or aryl group. The term "arylcarbonylaminoalkyl" represents an arylcarbonylamino group attached through a substituted or unsubstituted alkyl group as defined above having the indicated number of carbon atoms. The nitrogen group may itself be substituted with a substituted or unsubstituted alkyl or aryl group.

The term "arylcarbonylhydrazino" (e.g. phenylcarbonylhydrazino, naphthylcarbonylhydrazino, and the like) represents an arylcarbonyl group as defined above wherein the carbonyl is in turn attached through the nitrogen atom of a hydrazino group.

The terms "heteroaryl", "heterocycle" or "heterocyclic" refers to a monovalent unsaturated group having a single ring or multiple condensed rings, from 1 to 8 carbon atoms and from 1 to 4 hetero atoms selected from nitrogen, sulfur or oxygen within the ring. For the purposes of this application, the terms "heteroaryl", "heterocycle" or "heterocyclic" do not include carbohydrate rings (i.e. mono- or oligosaccharides).

Unless otherwise constrained by the definition for the "heteroaryl" substituent, such heterocyclic groups can be optionally substituted with 1 to 3 substituents selected from the group consisting of: halogen, -OH, -SH, -CN, -NO₂, trihalomethyl, hydroxypyronyl, C₁₋₁₀alkyl, arylC₀₋₁₀alkyl, C₀₋₁₀alkoxyC₀₋₁₀alkyl, arylC₀₋₁₀alkoxyC₀₋₁₀alkyl, C₀₋₁₀alkylthioC₀₋₁₀alkyl, arylC₀₋₁₀alkylthioC₀₋₁₀alkyl, C₀₋₁₀alkylaminoc₀₋₁₀alkyl, arylC₀₋₁₀alkylaminoc₀₋₁₀alkyl, N-aryl-N-C₀₋₁₀alkylaminoc₀₋₁₀alkyl, C₁₋₁₀alkylcarbonylC₀₋₁₀alkyl, arylC₁₋₁₀alkylcarbonylC₀₋₁₀alkyl, C₁₋₁₀alkylcarboxyC₀₋₁₀alkyl, arylC₀₋₁₀alkylcarboxyC₀₋₁₀alkyl, C₁₋₁₀alkylcarbonylaminoC₀₋₁₀alkyl, arylC₀₋₁₀alkylcarbonylaminoC₀₋₁₀alkyl, -C₀₋₁₀alkylCOOR₂₁, and -C₀₋₁₀alkylCONR₂₂R₂₃ wherein
R_{21}, R_{22} and R_{23} are independently selected from hydrogen, C_{1-10}alkyl, arylC_{3-10}alkyl, or R_{22} and R_{23} are taken together with the nitrogen to which they are attached forming a saturated cyclic or unsaturated cyclic system containing 3 to 8 carbon atoms with at least one substituent as defined above.

[0081] The definition of "heteroaryl" includes but is not limited to thiienyl, benzothienyl, isobenzothienyl, 2,3-dihydrobenzothienyl, furyl, pyranyl, benzofuranyl, isobenzofuranyl, 2,3-dihydrobenzofuranyl, pyrrolyl, maleimidyl (or pyrrolyl-2,5-dione), 3-pyrrolinyl, indolyl, isoindolyl, 3H-indolyl, indoliny1, indolizinyl, indazolyl, phthalimidyl (or isoindolyl-1,3-dione), imidazolyl, 2H-imidazoliny1, benzimidazolyl, pyridyl, pyrazinyl, pyrazinyl, pyrimidinyl, triazinyl, quinolyl, isoquinolyl, 4H-quinolinyl, cinnoliny1, phthalazinyl, quinazolinyl, quinoxalinyl, 1,8-naphthyridinyl, pteridinyl, carbazolyl, acridinyl, phenazinyl, phenothiazinyl, phenoxazinyl, chromanly1, benzodioxolyl, piperony1, purinyl, pyrazolyl, triazolyl, tetrazolyl, thiazolyl, isothiazolyl, benzthiazolyl, oxazolyl, isoxazolyl, benzoxazolyl, oxadiazolyl, thiadiazolyl and the like.

[0082] The term "saturated heterocyclic" represents an unsubstituted, mono-, di- or trisubstituted monocyclic, polycyclic saturated heterocyclic group covalently attached at any ring position capable of forming a stable covalent bond, certain preferred points of attachment being apparent to those skilled in the art (e.g., 1-piperidinyl, 4-piperazinyl and the like).

[0083] The saturated heterocyclic substituents are independently selected from the group consisting of halo, -OH, -SH, -CN, -NO_2, trihalomethyl, hydroxypyronyl, C_{1-10}alkyl, arylC_{1-10}alkyl, C_{9-10}alkyloxyC_{1-10}alkyl, arylC_{9-10}alkyloxyC_{9-10}alkyl, C_{9-10}alkylthioC_{9-10}alkyl, arylC_{9-10}alkylthioC_{9-10}alkyl, C_{9-10}alkylaminoC_{9-10}alkyl, arylC_{9-10}alkylaminoC_{9-10}alkyl, N-aryl-N-C_{9-10}alkylaminoC_{9-10}alkyl, C_{1-10}alkylcarbonylC_{1-10}alkyl, arylC_{1-10}alkylcarbonylC_{1-10}alkyl, C_{1-10}alkylcarboxyC_{1-10}alkyl, arylC_{1-10}alkylcarboxyC_{1-10}alkyl, C_{1-10}alkylcarbonylaminoc_{9-10}alkyl, arylC_{1-10}alkylcarbonylaminoc_{9-10}alkyl, -C_{9-10}alkylCOOR_{21}, and -C_{9-10}alkylCONR_{22}R_{23} wherein R_{21}, R_{22} and R_{23} are independently selected from hydrogen, C_{1-10}alkyl, arylC_{9-10}alkyl, or R_{22} and R_{23} are taken together with the nitrogen to which they are attached forming a saturated cyclic or unsaturated cyclic system containing 3 to 8 carbon atoms with at least one substituent as defined above.
[0084] The definition of saturated heterocyclic includes but is not limited to pyrroldinyl, pyrazolidinyl, piperidinyl, 1,4-dioxanyl, morpholinyl, 1,4-dithienyl, thiomorpholinyl, piperazinyl, quinuclidinyl and the like.

[0085] The term “alpha-beta-unsaturated carbonyl” refers to a molecule that has a carbonyl group directly attached to a double or triple bonded carbon and which would be obvious to one of ordinary skill and knowledge in the art. The definition of alpha-beta-unsaturated carbonyl includes but is not limited to acrolein, methyl vinyl ketone, and the like.
Invention compounds having structure A include
and pharmaceutically acceptable salts thereof
[0087] In another embodiment of the invention, there are provided pharmaceutical compositions comprising at least one of the compounds of the invention, as well as pharmaceutically acceptable pro-drugs and salts of such compounds, in a pharmaceutically acceptable vehicle, for enteral, parenteral, topical or ocular administration.

[0088] In another embodiment of the invention, there are provided pharmaceutical compositions comprising an effective regulating amount of at least one of the compounds of the invention in combination with a pharmaceutically acceptable carrier, for control of cellular processes, cellular differentiation, cellular proliferation or apoptosis.

[0089] In another embodiment of the invention, there are provided pharmaceutical compositions comprising in a pharmaceutically acceptable vehicle suitable for enteral, parenteral, or topical administration, one or more compounds of the invention for treating a mammalian subject wherein said wherein said compound exerts its therapeutic effects via the in vivo modulation of lipid metabolism, lipid homeostasis, hyperlipidemia, skin-related processes, autoimmune diseases, fatty acid metabolism, malignant cell development, premalignant lesions, programmed cell death, endocrinological processes, or AP-1 metabolism.

[0090] In another embodiment of the invention, there are provided pharmaceutical compositions comprising at least one of the compounds of the invention, in a pharmaceutically acceptable vehicle, for the treatment of carcinomas. Examples of carcinomas include mammary cancer, prostate cancer, kidney cancer, Kaposi's sarcoma, colon cancer, cervical cancer, lung cancer, cutaneous T-cell lymphoma, cancer of the head and neck, cancers of the aerodigestive pathway, skin cancer, bladder cancer, sarcomas, leukoplakias, acute promyelocytic leukemia, and the like.

[0091] In another embodiment of the invention, there are provided pharmaceutical compositions comprising at least one of the compounds of the invention in combination with other chemotherapeutic agents, in a pharmaceutically acceptable vehicle, for the treatment of carcinomas. Examples of chemotherapeutic agents contemplated for use in the practice of this particular invention include Busulfan, Carboplatin, Cisplatin, Cyclophosphamide, Cytosine arabinoside, Etoposide, 5-Fluorouracil, Melphalan, Methotrexate, Mitoxantrone, Taxol, Interferon, Fareston, Arzoxifene, Evista, Tamoxifen, and the like.
[0092] In another embodiment of the invention, there are provided pharmaceutical compositions comprising at least one the compounds of the invention in combination with one or more antiestrogenic agents, in a pharmaceutically acceptable vehicle, for the treatment of mammary carcinoma. Examples of antiestrogenic agents contemplated for use in the practice of this particular invention include Fareston, Arzoxifene, Evista, Tamoxifen, and the like.

[0093] In another embodiment of the invention, there are provided cosmeceutical compositions comprising at least one the compounds of the invention, in a cosmetically acceptable vehicle, for dermal indications.

[0094] In another embodiment, the present invention provides a process for preparing a compound of formula E. Such a process can be performed, for example, by contacting a compound of formula C with a compound of formula D under conditions suitable to form compound of formula E, as set forth below:

[0095] In the scheme shown above, Z is typically CH, or nitrogen; Y₃ is C₂₋₈ alkyl, or C₂₋₈ substituted alkyl, R₂ is typically

R₃ is alkyl, alkylxoy, or halogen; R₄ is alkyl, aryl, heteroaryl, or adamantyl; R₅ is alkyl, alkylxoy, alkylthio, aryl, or heteroaryl; or R₄ and R₅ may be linked together to form a
substituted or unsubstituted 5- or 6-membered cycloalkyl or cycloalkenyl ring, where said substituents are selected from the group consisting of –OH, =O, halogen, alkyl, and where 1 or 2 of the carbon atoms on said 5- or 6-membered cycloalkyl or cycloalkenyl ring may be optionally replaced by W where W is selected from the group consisting of O, S, N, NH, alkylamino, or arylamino; R₈, R₉, R₁₀, and R₁₁ are each independently hydrogen, halogen and alkyl, Y₁ and Y₂ are independently O, S, NH, or CH₂, or Y₁ is O, S or NH, and Y₂ is CH₂, with the proviso that Y₁ and Y₂ cannot both be O, S, or NH if n is 0 or 1, R₁₇ and R₁₈ are each independently hydrogen, alkyl, and aryl, R₂₅ is bromo, chloro, alkyl sulfonate, or aryl sulfonate; m and n are independently 0, 1, 2 or 3, and * represents the point of attachment of R₂ to the molecules of formula C and E.

[0096] Solvents contemplated for use in the practice of this particular invention process are typically ethereal solvents, such as for example, diethyl ether, dioxane, tetrahydrofuran, and the like, aromatic solvents, such as for example, toluene, benzene, and the like, and alcoholic solvents, such as for example, tert-butanol and the like, or any suitable mixtures thereof. The process is typically carried out at a temperature in the range of about 25°C up to about 120°C.

[0097] Compound C is typically contacted with compound of formula D in the presence of a mixture of a palladium catalyst, a ligand and a base. Palladium catalysts contemplated for use in the practice of this particular invention process include palladium (II) species such as for example palladium (II) acetate, tris(dibenzyldieneacetone)-dipalladium, palladium (II) acetylacetonate, palladium (II) bromide, palladium (II) chloride, palladium (II) hexafluoroacetylacetonate, palladium (II) sulfate, palladium (II) trifluoroacetate and the like. Ligands contemplated for use in the practice of this particular invention process include racemic-2,2’-bis(diphenylphosphino)-1,1’-binaphthyl, (R)-( +)-2,2’-bis(diphenylphosphino)-1,1’-binaphthyl, (S)-(−)-2,2’-bis(diphenylphosphino)-1,1’-binaphthyl, racemic-2,2’-bis(di-p-tolyolphosphino)-1,1’-binaphthyl, (R)-( +)-2,2’-bis(di-p-tolyolphosphino)-1,1’-binaphthyl, (S)-(−)-2,2’-bis(di-p-tolyolphosphino)-1,1’-binaphthyl, racemic-2-(di-tert-butylphosphino)-1,1’-binaphthyl, (R)-(−)-2-(di-tert-butylphosphino)-1,1’-binaphthyl, (S)-( +)-2-(di-tert-butylphosphino)-1,1’-binaphthyl, 9,9-Dimethyl-4,5-bis(diphenylphosphino)xanthene, 2,2’-bis-(diphenylphosphino)-1,1’-biphenyl, racemic 4,12-bis(diphenylphosphino)[2.2]-paracyclophane, (R)-(−)-4,12-bis(diphenylphosphino)[2.2]-paracyclophane, (S)-( +)-4,12-bis(diphenylphosphino)[2.2]-paracyclophane, 2-(di-cyclohexylphosphino)biphenyl, 2-dicyclohexylphosphino-2’-(N,N-
dimethylamino)-1,1'-biphenyl, 2-dicyclohexylphosphino-2'-methyl-1,1'-biphenyl, 2-dicyclohexylphosphino-2'-isopropyl-1,1'-biphenyl, (2-dicyclohexylphosphino)-2',4',6'-triisopropyl-1,1'-biphenyl, 2-dicyclohexylphosphino-2',6'-dimethoxy-1,1'-biphenyl, 2-(di-tert-butylphosphino)-1,1'-biphenyl, 2-di-tert-butylphosphino-2'-(N,N-dimethylamino)-1,1'-biphenyl, 2-di-tert-butylphosphino-2'-methylbiphenyl, 2-di-tert-butylphosphino-2'-isopropylbiphenyl, (2-di-tert-butylphosphino)-2',4',6'-triisopropyl biphenyl, (2-di-tert-butylphosphino)-2',6'-dimethoxybiphenyl, 2-(diphenylphosphino)biphenyl, 2-(diphenylphosphino)-2'-(N,N-dimethylamino)biphenyl, 2-di-phenylphosphino-2'-methylbiphenyl, 2-di-phenylphosphino-2'-isopropylbiphenyl, (2-diphenylphosphino)-2',4',6'-triisopropyl biphenyl, (2-diphenylphosphino)-2',6'-dimethoxybiphenyl, 1,1-bis-(di-tert-butylphosphino)ferrocene, 1-diphenylphosphino-2-(di-tert-butylphosphino)-ethylferrocene, tri-tert-butylphosphine, tricyclohexylphosphine, and the like. Bases contemplated for use in the practice of this particular invention process include sodium tert-butoxide, potassium tert-butoxide, cesium carbonate, potassium carbonate, potassium phosphate tribasic (K₃PO₄), and the like.

[0098] In another embodiment, the present invention provides a process for preparing a compound of formula H. Such a process can be performed, for example, by contacting a compound of formula F with a compound of formula G under conditions suitable to form compound of formula H, as set forth below:

In the scheme shown above, Z is typically CH, or nitrogen; R₃ is typically
[0099] \( R_3 \) is alkyl, alkoxy, or halogen; \( R_4 \) is alkyl, aryl, heteroaryl, or adamantyl; \( R_5 \) is alkyl, alkoxy, alkylthio, aryl, or heteroaryl; or \( R_4 \) and \( R_5 \) may be linked together to form a substituted or unsubstituted 5- or 6-membered cycloalkyl or cycloalkenyl ring, where said substituents are selected from the group consisting of \(-\text{OH}, =\text{O}, \text{halogen}, \text{alkyl}, \) and where 1 or 2 of the carbon atoms on said 5- or 6-membered cycloalkyl or cycloalkenyl ring may be optionally replaced by \( W \) where \( W \) is selected from the group consisting of \( \text{O}, \text{S}, \text{N}, \text{NH}, \text{alkylamino}, \text{or arylamino}; \text{R}_6, \text{R}_7, \text{R}_{10} \) and \( \text{R}_{11} \) are each independently hydrogen, halogen and alkyl, \( \text{Y}_1 \) and \( \text{Y}_2 \) are independently \( \text{O}, \text{S}, \text{NH}, \text{or CH}_2, \) or \( \text{Y}_1 \) is \( \text{O}, \text{S} \) or \( \text{NH}, \) and \( \text{Y}_2 \) is \( \text{CH}_2, \) with the proviso that \( \text{Y}_1 \) and \( \text{Y}_2 \) cannot both be \( \text{O}, \text{S}, \) or \( \text{NH} \) if \( n \) is 0 or 1, \( \text{R}_{15} \) and \( \text{R}_{16} \) are each independently \(-\text{OH}, \text{alkoxy}, \text{aryloxy}, -\text{NH}_2, \text{alkylamino}, \text{arylamino}, \text{N-aryl-N-alkylamino}, -\text{NHNH}_2, \text{alkylhydrazino}, \text{arylhydrazino}, \text{N-aryl-N-alkylhydrazino}, -\text{NHOR}_{17}, \text{alkyl, and ary}, \text{R}_{25} \) is bromo, chloro, alkyl sulfonate, or aryl sulfonate; and \( m \) and \( n \) are independently 0, 1, 2 or 3, and * represents the point of attachment of \( \text{R}_5 \) to the molecules of formula \( \text{F} \) and \( \text{H}. \)

[0100] Solvents contemplated for use in the practice of this particular invention process are typically ethereal solvents, such as for example, diethyl ether, dioxane, tetrahydrofuran, and the like, aromatic solvents, such as for example, toluene, benzene, and the like, and aliphatic solvents, such as for example, tert-butanol and the like, or any suitable mixtures thereof. The process is typically carried out at a temperature in the range of about 25°C up to about 120°C.

[0101] Compound \( \text{F} \) is typically contacted with compound of formula \( \text{G} \) in the presence of a mixture of a palladium catalyst, a ligand and a base. Palladium catalysts contemplated for use in the practice of this particular invention process include palladium (II) species such as for example palladium (II) acetate, tris(dibenzylideneacetone)-dipalladium, palladium (II) acetylacetonate, palladium (II) bromide, palladium (II) chloride, palladium (II) hexafluoropropionate, palladium (II) sulfate, palladium (II) trifluoropropionate and the like. Ligands contemplated for use in the practice of this particular invention process include racemic-2,2'-bis(diphenylphosphino)-1,1'-binaphthyl, (R)(+)2,2'-bis(diphenylphosphino)-1,1'-binaphthyl, (S)(-)2,2'-bis(diphenylphosphino)-1,1'-binaphthyl, racemic-2,2'-bis(di-p-tolyphosphino)-1,1'-binaphthyl, (R)(+)2,2'-bis(di-p-tolyphosphino)-1,1'-binaphthyl, (S)(-)2,2'-bis(di-p-tolyphosphino)-1,1'-binaphthyl, racemic-2-(di-tert-butylphosphino)-1,1'-
binaphthyl, (R)-2-(di-tert-butylphosphino)-1,1'-binaphthyl, (S)-2-(di-tert-butylphosphino)-1,1'-binaphthyl, 9,9-Dimethyl-4,5-bis(diphenylphosphino)xanthene, 2,2'-bis(diphenylphosphino)-1,1'-biphenyl, racemic 4,12-bis(diphenylphosphino)-[2.2]-paracyclophepane, (R)-(−)-4,12-bis(diphenylphosphino)-[2.2]-paracyclophepane, (S)-(−)-4,12-bis(diphenylphosphino)-[2.2]-paracyclophepane, 2-(di-cyclohexylphosphino)biphenyl, 2-di-cyclohexylphosphino-2'-(N,N-dimethylamino)biphenyl, 2-di-cyclohexylphosphino-2'-methylbiphenyl, 2-di-cyclohexylphosphino-2'-isopropylbiphenyl, (2-dicyclohexylphosphino)-2',4',6'-triisopropylbiphenyl, 2-(di-tert-butylphosphino)biphenyl, 2-di-tert-butylphosphino-2'-(N,N-dimethylamino)biphenyl, 2-di-tert-butylphosphino-2'-methylbiphenyl, 2-di-tert-butylphosphino-2'-isopropylbiphenyl, (2-di-tert-butylphosphino)-2',4',6'-triisopropylbiphenyl 2-(di-phenylphosphino)biphenyl, 2-(di-phenylphosphino)-2'-(N,N-dimethylamino)biphenyl, 2-di-phenylphosphino-2'-methylbiphenyl, 2-di-phenylphosphino-2'-isopropylbiphenyl, (2-diphenylphosphino)-2',4',6'-triisopropylbiphenyl, 1,1-bis-(di-tert-butylphosphino)ferrocene, 1-diphenylphosphino-2-(di-tert-butylphosphino)-ethylferrocene, tri-tert-butylphosphine, tricyclohexylphosphine, and the like. Bases contemplated for use in the practice of this particular invention process include sodium tert-butoxide, potassium tert-butoxide, cesium carbonate, potassium phosphate tribasic (K₃PO₄), and the like.

[0102] Before the present compounds, compositions and methods are disclosed and described, it is to be understood that this invention is not limited to specific synthetic methods, specific pharmaceutical carriers, or to particular pharmaceutical formulations or administration regimens, as such may, of course, vary. It is also to be understood that the terminology used herein is for the purpose of describing particular embodiments only and is not intended to be limiting.

[0103] It must be noted that, as used in the specification and the appended claims, the singular forms "a," "an" and "the" include plural referents unless the context clearly dictates otherwise. Thus, for example, reference to "a bicyclic aromatic compound" includes mixtures of bicyclic aromatic compounds, reference to "a pharmaceutical carrier" includes mixtures of two or more such carriers, and the like.

[0104] Certain pharmaceutically acceptable salts of the invention are prepared by treating the novel compounds of the invention with an appropriate amount of pharmaceutically acceptable base. Representative pharmaceutically acceptable bases are
ammonium hydroxide, sodium hydroxide, potassium hydroxide, lithium hydroxide, calcium hydroxide, magnesium hydroxide, ferrous hydroxide, zinc hydroxide, copper hydroxide, aluminum hydroxide, ferric hydroxide, isopropylamine, trimethylamine, diethylamine, triethylamine, tripropylamine, ethanolamine, 2-dimethylaminoethanol, 2-diethylaminoethanol, lysine, arginine, histidine, and the like. The reaction is conducted in water, alone or in combination with an inert, water-miscible organic solvent, at a temperature of from about 0°C to about 100°C, preferably at room temperature. The molar ratio of compounds of structural formula A to base used is chosen to provide the ratio desired for any particular salts. For preparing, for example, the ammonium salts of the starting material, compounds of formula A can be treated with approximately one equivalent of the pharmaceutically acceptable base to yield a neutral salt. When calcium salts are prepared, approximately one-half a molar equivalent of base is used to yield a neutral salt, while for aluminum salts, approximately one-third a molar equivalent of base will be used.

[0105] The compounds of the invention according to formula A, including the pharmaceutically acceptable pro-drugs or salts thereof, are useful to elicit, modulate and/or regulate selective gene expression by cellular receptors and provide control over cellular growth, proliferation and differentiation processes regulated by certain hormones or vitamins such as for example all-trans-retinoic acid, 13-cis-retinoic acid, 9-cis-retinoic acid, vitamin D, thyroid hormone and the like. As noted above, the compounds of the invention are thus useful in the treatment of conditions and/or diseases that are regulated by the aforementioned entities. Examples of such conditions include for example cancer, mammary cancer, prostate cancer, kidney cancer, Kaposi's sarcoma, colon cancer, cervical cancer, lung cancer, cutaneous T-cell lymphoma, cancer of the head and neck, cancers of the aerodigestive pathway, skin cancer, bladder cancer, sarcomas, leukoplakias, acute promyelocytic leukemia, acne, psoriasis, aging, wrinkling, diabetes, hyperglycemia, bone calcification, thyroid conditions, and the like.

[0106] The compounds of the invention may be conveniently formulated into pharmaceutical compositions composed of one or more of the compounds together with a pharmaceutically acceptable carrier as described in Remington's Pharmaceutical Sciences, latest edition, by E. W. Martin (Mack Publ. Co., Easton Pa.).
[0107] The compounds of the invention may be administered orally, parenterally (e.g., intravenously), by intramuscular injection, by intraperitoneal injection, topically, transdermally, or the like, although oral or topical administration is typically preferred. The amount of active compound administered will, of course, be dependent on the subject being treated, the subject's weight, the manner of administration and the judgment of the prescribing physician. The dosage will be in the range of about 2 microgram per kilogram per day to 4 milligram per kilogram per day.

[0108] Depending on the intended mode of administration, the pharmaceutical compositions may be in the form of solid, semi-solid or liquid dosage forms, such as, for example, tablets, suppositories, pills, capsules, powders, liquids, suspensions, lotions, creams, gels and the like, preferably in unit dosage form suitable for single administration of a precise dosage. The compositions will include, as noted above, an effective amount of the selected drug in combination with a pharmaceutically acceptable carrier and, in addition, may include other medicinal agents, pharmaceutical agents, carriers, adjuvants, diluents and the like.

[0109] For solid compositions, conventional non-toxic solid carriers include, for example, pharmaceutical grades of mannitol, lactose, starch, magnesium stearate, sodium saccharin, talc, cellulose, glucose, sucrose, magnesium carbonate, and the like. Liquid pharmaceutically administrable-compositions can, for example, be prepared by dissolving, dispersing, etc., an active compound as described herein and optional pharmaceutical adjuvants in an excipient, such as, for example, water, saline, aqueous dextrose, glycerol, ethanol, and the like, to thereby form a solution or suspension. If desired, the pharmaceutical composition to be administered may also contain minor amounts of nontoxic auxiliary substances such as wetting or emulsifying agents, pH buffering agents and the like, for example, sodium acetate, sorbitan monolaurate, triethanolamine sodium acetate, triethanolamine oleate, etc. Actual methods of preparing such dosage forms are known, or will be apparent, to those skilled in this art; for example, see Remington's Pharmaceutical Sciences, referenced above.

[0110] For oral administration, fine powders or granules may contain diluting, dispersing, and/or surface active agents, and may be presented in water or in a syrup, in capsules or sachets in the dry state, or in a non-aqueous solution or suspension wherein
suspending agents may be included, in tablets wherein binders and lubricants may be included, or in a suspension in water or a syrup. Wherever required, flavoring, preserving, suspending, thickening, or emulsifying agents may also be included. Tablets and granules are preferred oral administration forms, and these may be coated.

[0111] Parenteral administration, if used, is generally characterized by injection. Injectables can be prepared in conventional forms, either as liquid solutions or suspensions, solid forms suitable for solution or suspension in liquid prior to injection, as emulsions, or as sustained release delivery system.

EXAMPLES

[0112] Used herein, the following abbreviations have the following meanings: Me refers to methyl (CH₃), Et refers to ethyl (CH₃CH₂), i-Pr refers to isopropyl ((CH₃)₂CH), t-Bu or tert-butyl refers to tertiary butyl ((CH₃)₃CH), Ph refers to phenyl, Bn refers to benzyl (PhCH₂), Bz refers to benzoyl (PhCO-), MOM refers to methoxymethyl, Ac refers to acetyl, TMS refers to trimethylsilyl, TBS refers to tert-butyldimethylsilyl, Ms refers to methanesulfonylethyl (CH₃SO₂), Ts refers to p-toluenesulfonyl (p-CH₃PhSO₂), Tf refers to trifluoromethanesulfonyl (CF₃SO₂), TfO refers to trifluoromethanesulfonate (CF₃SO₂-), DMF refers to N,N-dimethylformamide, DCM refers to dichloromethane (CH₂Cl₂), THF refers to tetrahydrofuran, ETOAc refers to ethyl acetate, Et₂O refers to diethyl ether, MeCN refers to acetonitrile (CH₃CN), NMP refers to 1-N-methyl-2-pyrrolidinone, DMA refers to N,N-dimethylacetamide, DMSO refers to dimethylsulfoxide, DCC refers to 1,3-dicyclohexylcarbodiimide, EDCI refers to 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide, Boc refers to tert-butylcarbonyl, Fmoc refers to 9-fluorenylmethoxycarbonyl, TBAF refers to tetrabutylammonium fluoride, TBAI refers to tetrabutylammonium iodide, TMEDA refers to 1,4,8,11-tetramethylcyclododecane, Dess-Martin periodinane or Dess Martin reagent refers to 1,1,1-triacetoxy-1,1-dihydro-1,2-benziodoxol-3(1H)-one, DMAP refers to 4-N,N,N,N-tetramethylethylenediamine, (i-Pr)₂NEt or DIEA or Hunig’s base refers to N,N-diethylisopropylamine, DBU refers to 1,8-Diazabicyclo[5.4.0]undec-7-ene, (DHQ)₂AQN refers to dihydroquinine anthraquinone-1,4-diyldiether, (DHQ)₂PHAL refers to dihydroquinine phthalazine-1,4-diyl diether, (DHQ)₂PYR refers to dihydroquinine 2,5-diphenyl-4,6-pyrimidinediyldiether, (DHQD)₂AQN refers to dihydroquinidine anthraquinone-1,4-diyldiether, (DHQD)₂PHAL refers to dihydroquinidine phthalazine-1,4-diyl diether, (DHQD)₂PYR
refers to dihydroquinidine 2,5-diphenyl-4,6-pyrimidine-4-yl diether, LDA refers to lithium diisopropylamide, LiTMP refers to lithium 2,2,6,6-tetramethylpiperdininamide, n-BuLi refers to n-butyllithium, t-BuLi refers to tert-butyl lithium, IBA refers to 1-hydroxy-1,2-benziodoxol-3(1H)-one 1-oxide, OsO₄ refers to osmium tetroxide, m-CPBA refers to meta-chloroperbenzoic acid, DMD refers to dimethyl dioxirane, PDC refers to pyridinium dichromate, NMO refers to N-methyl morpholine-N-oxide, NaHMDS refers to sodium hexamethyldisilazide, LiHMDS refers to lithium hexamethyldisilazide, HMPA refers to hexamethylphosphoramide, TMSCI refers to trimethylsilyl chloride, TMSCN refers to trimethylsilyl cyanide, TBSCI refers to tert-butylimethylsilyl chloride, TFA refers to trifluoroacetic acid, TFAA refers to trifluoroacetic anhydride, AcOH refers to acetic acid, Ac₂O refers to acetic anhydride, AcCl refers to acetyl chloride, TsOH refers to p-toluensulfonic acid, TsCl refers to p-toluensulfonyl chloride, MBHA refers to 4-methylbenzyldrylamine, BHA refers to benzhydrylamine, ZnCl₂ refers to zinc (II) dichloride, BF₃ refers to boron trifluoride, Y(OTf)₃ refers to yttrium (III) trifluoromethanesulfonate, Cu(BF₄)₂ refers to copper (II) tetrafluoroborate, LAH refers to lithium aluminum hydride (LiAlH₄), NaHCO₃ refers to sodium bicarbonate, K₂CO₃ refers to potassium carbonate, NaOH refers to sodium hydroxide, KOH refers to potassium hydroxide, LiOH refers to lithium hydroxide, HCl refers to hydrochloric acid, H₂SO₄ refers to sulfuric acid, MgSO₄ refers to magnesium sulfate, and Na₂SO₄ refers to sodium sulfate. 1H NMR refers to proton nuclear magnetic resonance, 13C NMR refers to carbon 13 nuclear magnetic resonance, NOE refers to nuclear overhauser effect, NOESY refers to nuclear overhauser and exchange spectroscopy, COSY refers to homonuclear correlation spectroscopy, HMQC refers to proton detected heteronuclear multiplet-quantum coherence, HMBC refers to heteronuclear multiple-bond connectivity, s refers to singlet, br s refers to broad singlet, d refers to doublet, br d refers to broad doublet, t refers to triplet, q refers to quartet, dd refers to double doublet, m refers to multiplet, ppm refers to parts per million, IR refers to infrared spectrometry, MS refers to mass spectrometry, HRMS refers to high resolution mass spectrometry, EI refers to electron impact, FAB refers to fast atom bombardment, CI refers to chemical ionization, HPLC refers to high pressure liquid chromatography, TLC refer to thin layer chromatography, Rₜ refers to retention time, GC refers to gas chromatography, min is minutes, h is hours, rt or RT is room temperature, g is grams, mg is milligrams, L is liters, mL is milliliters, mol is moles and mmol is millimoles.
For all of the following examples, standard work-up and purification methods can be utilized and will be obvious to those skilled in the art. Synthetic methodologies that make up the invention are shown in Schemes 1-4. These Schemes are intended to describe the applicable chemistry through the use of specific examples and are not indicative of the scope of the invention.

**Example 1 – 1,1,4,4,6-pentamethyl-1,2,3,4-tetrahydronaphthalene**

![Chemical Reaction Diagram]

To 2,5-dimethyl-2,5-hexanediol (10 g, 68.5 mmol) in a 500 mL flask was added reagent grade concentrated HCl (150 mL) and the solution was stirred at ambient temperature for 1 h. Water (100 mL) and CH₂Cl₂ (100 mL) were then added slowly and the layers were separated. The aqueous layer was washed with additional CH₂Cl₂ (100 mL). The combined organic layers were dried over MgSO₄ and filtered thru silica gel pad. The solvent was removed to yield 10.9g (87%) of 2,5-dichloro-2,5-dimethylhexane. The dichloride was dissolved in 150 mL of CH₂Cl₂ and 9.6 mL of toluene (90 mmol) was added. AlCl₃ (390 mg, 2.9 mol) was added in portions over 5 min at ambient temperature. HCl is evolved and the solution turns dark red. The reaction was placed in an ice-bath and quenched with deionized water (120 mL). Hexane (150 mL) was added and the organic layer was removed. The aqueous layer was washed with additional hexane (150 mL). The combined organic layers were washed with water (200 mL) and brine (100 mL) and dried over MgSO₄. The solvent was removed in vacuo to give 1,1,4,4,6-pentamethyl-1,2,3,4-tetrahydronaphthalene as a colorless oil that crystallized after storage at −20°C.

Yield: 12 g (91%); low melting white solid; Rf = 0.7 in 100% hexane.

**¹H NMR (CDCl₃, 300 MHz)** δ 1.32 (s, 12H), 1.7 (s, 4H), 2.34 (s, 3H), 6.85 (dd, 1H), 7.14 (d, 1H), 7.22 (d, 1H)

**¹³C NMR (CDCl₃, 75 MHz)** δ 21.54, 32.26, 32.32, 34.29, 34.51, 35.57, 35.63, 126.64, 126.75, 127.21, 134.93, 142.00, 144.83
Example 2 – (4-Bromophenyl) - (3,5,5,8,8-pentamethyl-5,6,7,8-tetrahydro-naphthalen-2-yl)-methanone

\[
\text{CH}_3
\]

[0115] 1,1,4,4,6-pentamethyl-1,2,3,4-tetrahydro-naphthalene (2 g, 9.9 mmol) and 4-bromobenzoyl chloride (2.17 g, 9.9 mol) were dissolved in 20 mL of CH\textsubscript{2}Cl\textsubscript{2} and cooled to 0°C using an ice-water-NaCl bath. AlCl\textsubscript{3} (3.95 g, 29.7 mmol) was added in portions at over 5 min. The dark reaction mixture was allowed to stir at 0°C for 5 min. The reaction was quenched by slow addition of ice at 0°C. The mixture was diluted with water and 150 mL of EtOAc was added and the layers were separated. The aqueous layer was washed with additional EtOAc (150 mL). The combined organic layers were washed with water (200 mL) and brine (100 mL) and dried over MgSO\textsubscript{4}. The filtrate was concentrated in vacuo to yield a yellow foamy solid residue that was recrystallized from MeOH (40 mL).

Yield : 2.85 g (74%); white solid; R\textsubscript{f} = 0.3 in 100% hexane

\(^1\)H NMR (CDCl\textsubscript{3}, 300 MHz) δ 1.22 (s, 6H), 1.32 (s, 6H), 1.7 (s, 4H), 2.32 (s, 3H), 7.18 (s, 1H), 7.22 (s, 1H), 7.59 (d, 2H), 7.68 (d, 2H)

\(^13\)C NMR (CDCl\textsubscript{3}, 75 MHz) δ 20.26, 32.01, 32.1, 34.28, 34.71, 35.27, 35.31, 128.06, 128.16, 129.51, 131.81, 131.9, 134.32, 135.15, 137.24, 142.04, 148.14, 197.46
Example 3 – 6-[1-(4-Bromophenyl)-vinyl]-1,1,4,4,7-pentamethyl-1,2,3,4-tetrahydronaphthalene

[0116] A solution of (4-bromophenyl)-(3,5,5,8,8-pentamethyl-5,6,7,8-tetrahydronaphthalen-2-yl)-methanone (385 mg, 1 mmol) in 3.7 mL of dry THF was cooled to −78°C under an atmosphere of nitrogen. A 3.0M solution of MeMgCl in THF (0.517 mL, 1.55 mmol) was added dropwise at −78°C and the mixture warmed to ambient temperature. The reaction was heated to reflux for 10 min, cooled to ambient temperature and quenched with MeOH-EtOAc. The solvent was removed in vacuo, toluene (15 mL) and p-toluenesulfonic acid monohydrate (0.190 g) were added and the mixture was heated to reflux, allowing the distillate to condense in a Dean-Stark trap prefilled with toluene. The reaction was complete after 1 h and the reaction cooled and was extracted with water and EtOAc. The organic layer was washed with NaHCO₃ and brine and dried over MgSO₄ and filtered thru a pad of silica gel. The solvent was removed in vacuo and the residue was recrystallized from MeOH.

Yield: 0.355 g (93%); white solid; Rₗ = 0.13 in 5% Et₂O-hexane

¹H NMR (CDCl₃, 300 MHz) δ 1.28 (s, 6H), 1.31 (s, 6H), 1.7 (s, 4H), 1.96 (s, 3H), 5.22 (d, 1H), 5.7 (d, 1H), 7.05 (s, 1H), 7.08 (s, 1H), 7.15 (d, 2H), 7.38 (d, 2H)
Example 4 – 3-Hydroxy-2-[4-(3,5,5,8,8-pentamethyl-5,6,7,8-tetrahydro-2-naphthalene-2-carbonyl)-phenyl]-cyclohex-2-enone

Example 5 – 3-Hydroxy-2-{4-[1-(3,5,7,8-pentamethyl-5,6,7,8-tetrahydro-naphthalen-2-yl)-vinyl]-phenyl}-cyclohex-2-enone

\[
\text{[0118] A flame-dried Schlenk tube containing a stirbar was charged with Pd(OAc)$_2$ (5.8 mg, 0.026 mmol), (2-dicyclohexylphosphino)-2',4',6'-triisopropyl biphenyl (27 mg, 0.057 mmol), 1,3-cyclohexanediene (35 mg, 0.313 mmol) and finely ground K$_2$PO$_4$ (127 mg, 0.6 mmol). The tube was capped with a septum, evacuated and backfilled with nitrogen. A solution of 6-[1-(4-bromophenyl)-vinyl]-1,1,4,4,7-pentamethyl-1,2,3,4-tetrahydro-naphthalene in 3 mL of dry THF was injected and the mixture was stirred at ambient temperature for 5 min and heated to 80°C for 5 h. The mixture was then cooled, diluted with MeOH and filtered. The filtrate was concentrated and absorbed on silica gel with MeOH-acetone and chromatographed using MeOH-CH$_2$Cl$_2$.}
\]

Yield: 43 mg (40%); white solid; R$_f$ = 0.5 in 10% MeOH-CH$_2$Cl$_2$

$^1$H NMR ($d_6$-DMSO, 300 MHz) δ 1.21 (s, 6H), 1.22 (s, 6H), 1.62 (s, 4H), 1.9 (m, 2H), 1.94 (s, 3H), 2.42 (br m, 4H), 5.04 (d, 1H), 5.76 (d, 1H), 7.0-7.12 (m, 6H)
Example 6 – 3-Hydroxy-5,5-dimethyl-2-{4-[1-(3,5,5,8-pentamethyl-5,6,7,8-tetrahydro-naphthalen-2-yl)-vinyl]-phenyl}-cyclohex-2-enone

57

[0119] A flame-dried Schlenk tube containing a stirbar was charged with Pd(OAc)$_2$ (4.4 mg, 0.02 mmol), (2-dicyclohexylphosphino)-2',4',6'-trisopropyl biphenyl (20 mg, 0.04 mmol), 5,5-dimethyl-1,3-cyclohexanedione (33 mg, 0.235 mmol) and finely ground K$_3$PO$_4$ (96 mg, 0.45 mmol). The tube was capped with a septum, evacuated and backfilled with nitrogen. A solution of 6-[1-(4-bromophenyl)-vinyl]-1,1,4,4,7-pentamethyl-1,2,3,4-tetrahydro-naphthalene in 1 mL of dry THF was injected and the mixture was stirred at ambient temperature for 5 min and heated to 80°C for 5 h. The mixture was then cooled, diluted with MeOH and filtered. The filtrate was concentrated and chromatographed using EtOAc-hexane.

Yield: 40 mg (46%); white solid; R$_f$ = 0.4 in 50% EtOAc-hexane

$^1$H NMR (CDCl$_3$, 300 MHz) $\delta$ 1.16 (s, 6H), 1.26 (s, 6H), 1.31 (s, 6H), 1.69 (s, 4H), 2.01 (s, 3H), 2.38 (br s, 2H), 2.48 (br s, 2H), 5.21 (d, 1H), 5.76 (d, 1H), 6.06 (s, 1H), 7.06 (s, 1H), 7.09 (s, 1H), 7.12 (d, 2H), 7.35 (d, 2H)
Example 6 – 3-Hydroxy-2-[4-[1-(3,5,5,8,8-pentamethyl-5,6,7,8-tetrahydro-naphthalen-2-yl)-vinyl]-phenyl]-cyclopent-2-enone

[0120] A flame-dried Schlenk tube containing a stirbar was charged with Pd(OAc)$_2$ (4.4 mg, 0.02 mmol), (2-dicyclohexylphosphino)-2',4',6'-triisopropyl biphenyl (20 mg, 0.04 mmol), 1,3-cyclopentanedione (23 mg, 0.235 mmol) and finely ground K$_2$PO$_4$ (96 mg, 0.45 mmol). The tube was capped with a septum, evacuated and backfilled with nitrogen. A solution of 6-[1-(4-bromophenyl)-vinyl]-1,1,4,4,7-pentamethyl-1,2,3,4-tetrahydro-naphthalene in 1 mL of dry THF was injected and the mixture was stirred at ambient temperature for 5 min and heated to 80°C for 15 h. The mixture was then cooled, diluted with MeOH and filtered. The filtrate was concentrated and chromatographed using MeOH-CH$_2$Cl$_2$.

Yield: 7 mg (10%); white solid; R$_f$ = 0.5 in 10% MeOH-CH$_2$Cl$_2$

$^1$H NMR (d$_6$-acetone, 300 MHz) δ 1.28 (s, 6H), 1.32 (s, 6H), 1.74 (s, 4H), 1.98 (s, 3H), 2.5 (s, 4H), 5.05 (d, 1H), 5.75 (d, 1H), 7.16 (m, 4H), 8.2 (d, 2H)
Example 8 – 3-Hydroxy-2-[4-(3,5,5,8,8-pentamethyl-5,6,7,8-tetrahydro-naphthalene-2-carbonyl)-phenyl]-cyclohex-2-enone potassium salt

![Chemical Structure]

3-Hydroxy-2-[4-(3,5,5,8,8-pentamethyl-5,6,7,8-tetrahydro-naphthalene-2-carbonyl)-phenyl]-cyclohex-2-enone (5.2 mg, 0.0125 mmol) was suspended in 0.5 mL of CH$_2$CN and treated with 6 µl of 1.79 M aqueous KOH. The mixture was sonicated to homogeneity and the solvent was removed.

Yield: 5.6 mg (99%); yellow oil;
MS-ESI positive ion: 455 (M+H)$^+$, 417 (M+2H-K)$^+$; MS-ESI negative ion: 415 (M-K)$^-$

Example 9 – 3-Hydroxy-2-[4-[1-(3,5,5,8,8-pentamethyl-5,6,7,8-tetrahydro-naphthalen-2-yl)-vinyl]-phenyl]-cyclohex-2-enone potassium salt

![Chemical Structure]

3-Hydroxy-2-[4-[1-(3,5,5,8,8-pentamethyl-5,6,7,8-tetrahydro-naphthalen-2-yl)-vinyl]-phenyl]-cyclohex-2-enone (13.4 mg, 0.032 mmol) was suspended in 3 mL of CH$_2$CN and treated with 18 µl of 1.79 M aqueous KOH. The mixture was sonicated to homogeneity and the solvent was removed.

Yield: 14 mg (99%); foamy solid;
Example 10 – 3-Hydroxy-5,5-dimethyl-2-{4-[1-(3,5,5,8,8-pentamethyl-5,6,7,8-tetrahydro-naphthalen-2-yl)-vinyl]-phenyl}-cyclohex-2-enone potassium salt

3-Hydroxy-5,5-dimethyl-2-{4-[1-(3,5,5,8,8-pentamethyl-5,6,7,8-tetrahydro-naphthalen-2-yl)-vinyl]-phenyl}-cyclohex-2-enone (5.5 mg, 0.012 mmol) was suspended in 0.5 mL of CH$_3$CN and treated with 6.7 µl of 1.79 M aqueous KOH. The mixture was sonicated to homogeneity and the solvent was removed.

Yield: 15.7 mg (99%); foamy solid
Example 11 – A375 Tumor Cell Proliferation Assay

[0124] A375 cells (5,000 per well in 90% RPMI-1640 plus 10% Fetal Bovine Serum (FBS)) were pre-incubated in a black clear bottom 96-well plate in an atmosphere of 5% CO₂ at 37°C for 24 hours. Stock solutions of compounds in DMSO were diluted using a buffer and dilutions were added to each well. The final concentration DMSO in each well did not exceed 0.5%. The final assay pH was 7.4. The cells were incubated in RPMI-1640 with each compound for an additional 72 to 168 hours. Alamar Blue was added and the plate was incubated for an additional 12 hours. Fluorescence intensity was measured using a Gemini plate reader with excitation at 530 nm and emission at 590 nm. A decrease of 50 percent or more (≥50%) in fluorescence intensity relative to vehicle treated controls is an indication of significant anti-cancer activity.

[0125] IC₅₀ (50% Inhibitory Concentration): Test compound concentration where the increase in number or mass of cells from time₀ to 72 to 168 hours is reduced 50% relative to the corresponding vehicle controls.

[0126] TGI (Total Growth Inhibition): Test compound concentration where the increase in number or mass of cells after 72 to 168 hours is reduced to equal that at time t = 0. LC₅₀ (50% Lethal Concentration): Test compound concentration where the number or mass of cells after 72 to 168 hours is reduced 50% relative to that at time t = 0.

Example 12 – T47D Tumor Cell Proliferation Assay

[0127] T-47D cells (15,000 per well in 90% RPMI-1640 medium plus 10% Fetal Bovine Serum (FBS)) were pre-incubated in a black clear bottom 96-well plate in an atmosphere of 5% CO₂ at 37°C for 24 hours. Stock solutions of compounds in DMSO were diluted using a buffer and dilutions were added to each well in the presence or absence 20 µM Tamoxifen. The final concentration DMSO in each well did not exceed 0.5%. The final assay pH was 7.4. The cells were incubated in RPMI-1640 with each compound for an additional 72 to 192 hours. Alamar Blue was added and the plate was incubated for an additional 12 hours. Fluorescence intensity was measured using a Gemini plate reader with
excitation at 530 nm and emission at 590 nm. A decrease of 50 percent or more (≥50%) in fluorescence intensity relative to vehicle treated controls is an indication of significant anti-cancer activity.

Example 13 – SCC103 Tumor Cell Proliferation Assay

SCC 103 cells (15,000 per well in 90% EMEM medium plus 10% Fetal Bovine Serum [FBS]) were pre-incubated in a black clear bottom 96-well plate in an atmosphere of 5% CO₂ at 37°C for 24 hours. Stock solutions of compounds in DMSO were diluted using a buffer and dilutions were added to each well. The final concentration DMSO in each well did not exceed 0.5%. The final assay pH was 7.4. The cells were incubated in EMEM medium for an additional 72 hours. Alamar Blue (10% of culture volume) was added and the plate was incubated for an additional 12 hours. Fluorescence intensity was measured using a Gemini plate reader with excitation at 530 nm and emission at 590 nm. A decrease of 50 percent or more (≥50%) in fluorescence intensity relative to vehicle treated controls is an indication of significant anti-cancer activity.

Example 14 – Radioactive Ligand Binding Assay

[³H]-9 cis-retinoic acid (29 Ci/mmol) and MicroSpin G-25 Columns were purchased from Amersham Biosciences (Piscataway, NJ). Unlabeled 9-cis retinoic acid was purchased from Affinity BioReagents (Golden, CO). The retinoic acid receptor subtype RXRγ was purchased from BIOMOL (Plymouth Meeting, PA). Stock solution of 9-cis-retinoic acid, was prepared as either 5 mM ethanol or DMSO stock solutions, and serial dilutions were carried out in 1:1 DMSO-ethanol. The assay buffer consisted of the following for receptor assay: 8% glycerol, 120 mM KCl, 8 mM Tris, 5 mM CHAPS, 4 mM DTT, and 0.24 mM PMSF, pH 7.4, at room temperature.

The receptor binding assay was performed with a final volume of 250 µL containing from 10 to 20 µg of protein, plus 10 nM [³H]-9-cis-retinoic acid, RXRγ and varying concentrations of competing ligand (0-10⁻⁶ M). Incubations were carried out at 4°C for 18 h. Equilibrium under these conditions of buffer and temperature was achieved by 4 h. Non-specific binding was defined as that binding remaining in the presence of 1000 nM unlabeled 9-cis-retinoic acid. The receptor-ligand complex was separated from unincorporated [³H]-9-cis-retinoic acid by applying the binding reaction solution to pre-spun MicroSpin G-25
Column and centrifuged at 735 G for 2 minutes in a microcentrifuge. The amount of receptor-ligand complex was determined by liquid scintillation counting of the purified receptor-ligand complex. After correcting for non-specific binding, the IC$_{50}$ value was determined. The IC$_{50}$ value is defined as the concentration of competing ligand required to decrease specific binding by 50%; the IC$_{50}$ value was determined graphically from a log-logit plot of the data. K$_4$ value for 9-cis-retinoic acid using a modified Cheng-Prussof equation as described by Motulsky.

[0131] Although the invention has been described with reference to the above examples, it will be understood that modifications and variations are encompassed within the spirit and scope of the invention. Accordingly, the invention is limited only by the following claims.
CLAIMS

What is claimed is:

1. A compound having the structural formula A

\[
\begin{align*}
A & = \text{structural formula} \\
\end{align*}
\]

wherein:

a. \( R_1 \) is selected from the group consisting of substances having formulae \( A_1, A_2, A_3, A_4, A_5, \) and \( A_6 \)

\[
\begin{align*}
A_1 & = \text{structural formula} \\
A_2 & = \text{structural formula} \\
A_3 & = \text{structural formula} \\
A_4 & = \text{structural formula} \\
A_5 & = \text{structural formula} \\
A_6 & = \text{structural formula} \\
\end{align*}
\]

wherein:

i) \( Z \) is selected from the group consisting of CH, and nitrogen

ii) \( Y_3 \) is selected from the group consisting of \( C_{2-8} \) alkyl, and \( C_{2-8} \) substituted alkyl

iii) \( R_6 \) is selected from the group consisting of -OH, alkoxy, aryloxy, alkylcarboxy, arylcarboxy, -SH, alkylthio, arylthio, -NH$_2$, alkylamino, arylamino, N-aryl-N-
alkylamino, -NHNH₂, alkylhydrazino, aryldrazino, N-aryl-N-alkylhydrazino, -NHOR₁₇, -O(=O)(OR₁₇)(OR₁₈), -OCH₂O(=O)(OR₁₇)(OR₁₈), and -OSO₃R₁₇,
iv) R₇ is selected from the group consisting of hydrogen, halogen, and alkyl,
v) each of R₁₅ and R₁₆ is independently selected from the group consisting of -OH, alkoxy, aryloxy, -NH₂, alkylamino, arylamino, N-aryl-N-alkylamino, -NHNH₂, alkylhydrazino, aryldrazino, N-aryl-N-alkylhydrazino, -NHOR₁₇, alkyl, and aryl,
vi) each of R₁₇ and R₁₈ is independently selected from the group consisting of hydrogen, alkyl, and aryl,
vii) ** represents the point of attachment of the R₁ to the molecule of formula A.

b. R₂ is selected from the group consisting of

![Diagram of molecular structure]

wherein:
i) each of R₆, R₉, R₁₀ and R₁₁ is independently selected from the group consisting of hydrogen, halogen and alkyl,
ii) each of Y₁ and Y₂ is independently O, S, NH, or CH₂, or Y₁ is O, S or NH, and Y₂ is CH₂, with the proviso that Y₁ and Y₂ cannot both be O, S, or NH if n is 0 or 1, and
iii) * represents the point of attachment of the R₂ to the molecule of formula A.

c. R₃ substituents are independently selected from the group consisting of alkyl, alkoxy, and halogen,
d. R₄ is selected from the group consisting of alkyl, aryl, heteroaryl, and adamantyl; R₅ is selected from the group consisting of alkyl, alkoxy, alkylthio, aryl, and heteroaryl; or R₄ and R₅ may be linked together to form a substituted or unsubstituted 5- or 6-membered cycloalkyl or cycloalkenyl ring, where said substituents are selected from the group consisting of –OH, –O, halogen, alkyl, and where 1 or 2 of the carbon atoms on said 5- or 6-membered cycloalkyl or cycloalkenyl ring may be optionally replaced by W where W is selected from the group consisting of O, S, N, NH, alkylamino, and arylamino;
e. each of m and n is independently 0, 1, 2 or 3, and pharmaceutically acceptable salts thereof.

2. The compound according to claim 1, having a structure selected from the group consisting of substances having formulae $B_1$, $B_2$, $B_3$, $B_4$, $B_5$, $B_6$, $B_7$, $B_8$, $B_9$, and $B_{10}$

![Chemical structures](image)

wherein $R_{13}$ is selected from the group consisting of $O$, $S$, $(CH_3)C$ and $CH_2$, and $R_{14}$ is hydrogen or methyl.
3. The compound according to claim 1, having the structural formula

\[ \text{Diagram} \]

wherein \( R_{13} \) is selected from the group consisting of \( O \), \( S \), \( (CH_3)_2C \) and \( CH_2 \).

4. The compound according to claim 1, having the structural formula

\[ \text{Diagram} \]

wherein \( R_{13} \) is selected from the group consisting of \( O \), \( S \), \( (CH_3)_2C \) and \( CH_2 \).

5. The compound according to claim 1, wherein \( m \) is 0.

6. The compound according to claim 1, wherein \( m \) is 1.
7. A compound selected from a group consisting of

[Chemical structures are shown here, each with different functional groups and arrangements.]
and pharmaceutically acceptable salts thereof
8. A pharmaceutical composition comprising an effective regulating amount of at least one compound according to claim 1 in combination with a pharmaceutically acceptable carrier, for control of cellular processes, cellular differentiation, cellular proliferation or apoptosis.

9. A pharmaceutical composition comprising at least one compound according to claim 1, in a pharmaceutically acceptable vehicle, for enteral, parenteral, topical or ocular administration.

10. A pharmaceutical composition comprising at least one compound according to claim 1, in a pharmaceutically acceptable vehicle, for the treatment of cancer.

11. A pharmaceutical composition comprising at least one compound according to claim 1, in a pharmaceutically acceptable vehicle, for the treatment of cutaneous T-cell lymphoma, squamous cell carcinoma of the head and neck, lung cancer, mammary cancer, colon cancer, skin cancer, cervical cancer, prostate cancer, kidney cancer, cancers of the aerodigestive pathway, bladder cancer, sarcomas, and/or leukemia.

12. The pharmaceutical composition according to claim 10, further comprising at least one additional chemotherapeutic agent.

13. The pharmaceutical composition according to claim 12, wherein the additional chemotherapeutic agent is selected from the group comprising Busulfan, Carboplatin, Cisplatin, Cyclophosphamide, Cytosine arabinoside, Etoposide, 5-Fluorouracil, Melphalan, Methotrexate, Mitoxantrone, Taxol, Interferon, Fareston, Arzoxifene, Evista, and Tamoxifen.

14. The pharmaceutical composition according to claim 12, wherein the additional chemotherapeutic agent is at least one antiestrogenic agent.

15. A pharmaceutical composition comprising at least one compound according to claim 1 in combination with at least one other chemotherapeutic selected from the group consisting of Fareston, Arzoxifene, Evista, and Tamoxifen, in a pharmaceutically acceptable vehicle, for the treatment of mammary cancer.
16. A cosmeceutical composition comprising at least one compound according to claim 1, in a cosmetically acceptable vehicle, for dermal indications.

17. A cosmeceutical composition comprising at least one compound according to claim 1, in a cosmetically acceptable vehicle, for the treatment of acne and/or psoriasis.

18. A process for preparing a compound E comprising carrying out a reaction between a compound C and a compound D under conditions suitable to produce the compound E, wherein:

\[
\text{C} \rightarrow \text{D} \rightarrow \text{E}
\]

a. \( R_3 \) is selected from the group consisting of

\[
\text{C} \quad \text{C} \quad \text{C} \quad \text{C} \quad \text{C} \quad \text{C} \quad \text{C}
\]

wherein:

i) each of \( R_4, R_9, R_{10}, R_{11}, \) and \( R_{12} \) is independently selected from the group consisting of hydrogen, halogen and alkyl,

ii) each of \( Y_1 \) and \( Y_2 \) is independently O, S, NH, or CH₂, or \( Y_1 \) is O, S or NH and \( Y_2 \) is CH₂, with the proviso that \( Y_1 \) and \( Y_2 \) cannot both be O, S, or NH if \( n \) is 0 or 1, and

iii) * represents the point of attachment of the \( R_3 \) to the molecule of formula A

b. \( R_3 \) is selected from the group consisting of alkyl, alklyoxy, and halogen,

c. \( R_4 \) is selected from the group consisting of alkyl, aryl, heteroaryl, and adamantyl; \( R_5 \) is selected from the group consisting of alkyl, alklyoxy, alkylthio, aryl, and heteroaryl; or \( R_4 \) and
R₃ may be linked together to form a substituted or unsubstituted 5- or 6-membered cycloalkyl
or cycloalkenyl ring, where said substituents are selected from the group consisting of –OH,
=O, halogen, alkyl, and where 1 or 2 of the carbon atoms on said 5- or 6-membered
cycloalkyl or cycloalkenyl ring may be optionally replaced by W where W is selected from the
group consisting of O, S, N, NH, alkylamino, and arylamino;

d. Z is selected from the group consisting of CH, and nitrogen;

e. Y₃ is selected from the group consisting of C₂₋₆ alkyl, and C₂₋₆ substituted alkyl;

f. m is 0, 1, 2 or 3; and

g. R₂₅ is selected from a group consisting of bromo, chloro, alkyl sulfonate, and aryl
sulfonate.

19. The process according to claim 18, wherein the reaction is carried out in a solvent or a
mixture of solvents selected from the group consisting of dioxane, tetrahydrofuran,
toluene, benzene, water and tert-butanol.

20. The process according to claim 18, wherein the reaction is carried out between 25°C and
120°C.

21. The process according to claim 18, wherein the reaction is carried out in the presence of
a mixture of a palladium catalyst, a ligand and a base.

22. The process according to claim 18, wherein the reaction is carried out in the presence of
a mixture of a palladium catalyst selected from the group consisting of palladium (II)
acetate, tris(dibenzylideneacetone)-dipalladium, palladium (II) acetylacetonate, palladium
(II) bromide, palladium (II) chloride, palladium (II) hexafluoroacetylacetonate, palladium
(II) sulfate, and palladium (II) trifluoroacetate, a ligand selected from the group consisting
of racemic-2,2′-bis(diphenylphosphino)-1,1′-binaphthyl, (R)-(+)2,2′-
bis(diphenylphosphino)-1,1′-binaphthyl, (S)-(−)-2,2′-bis(diphenylphosphino)-1,1′-
binaphthyl, racemic-2,2′-bis(di-p-tolylphosphino)-1,1′-binaphthyl, (R)-(+)2,2′-bis(di-p-
tolylphosphino)-1,1′-binaphthyl, (S)-(−)-2,2′-bis(di-p-tolylphosphino)-1,1′-binaphthyl,
racemic-2-(di-tert-butylphosphino)-1,1'-binaphthyl, (R)-2-(di-tert-butylphosphino)-1,1'-binaphthyl, (S)-2-(di-tert-butylphosphino)-1,1'-binaphthyl, 9,9-Dimethyl-4,5-bis(diphenylphosphino)xanthene, 2,2'-bis(diphenylphosphino)-1,1'-biphenyl, racemic 4,12-bis(diphenylphosphino)-[2,2]-paracyclophane, (R)-(-)-4,12-bis(diphenylphosphino)-[2,2]-paracyclophane, (S)-(+)4,12-bis(diphenylphosphino)-[2,2]-paracyclophane, 2-(di-cyclohexylphosphino)biphenyl, 2-dicyclohexylphosphino-2'-(N,N-dimethylamino)-1,1'-biphenyl, 2-dicyclohexylphosphino-2'-methyl-1,1'-biphenyl, 2-dicyclohexylphosphino-2'-isopropyl-1,1'-biphenyl, (2-dicyclohexylphosphino)-2',4',6'-triisopropyl-1,1'-biphenyl, 2-dicyclohexylphosphino-2',6'-dimethoxy-1,1'-biphenyl, 2-(di-tert-butylphosphino)-1,1'-biphenyl, 2-di-tert-butylphosphino-2'-isopropylbiphenyl, (2-di-tert-butylphosphino)-2',4',6'-triisopropyl biphemyl, (2-di-tert-butylphosphino)-2',6'-dimethoxybiphemyl, 2-(diphenylphosphino)biphenyl, 2-(diphenylphosphino)-2'-(N,N-dimethylamino)biphenyl, 2-diphenylphosphino-2'-methylbiphenyl, 2-diphenylphosphino-2'-isopropylbiphenyl, (2-diphenylphosphino)-2',4',6'-triisopropyl biphenyl, (2-diphenylphosphino)-2',6'-dimethoxybiphemyl, 1,1-bis-(di-tert-butylphosphino)ferrocene, 1-diphenylphosphino-2-(di-tert-butylphosphino)-ethylferrocene, tri-tert-butylphosphine, and tri-cyclohexylphosphine, and a base selected from the group consisting of sodium tert-butoxide, potassium tert-butoxide, cesium carbonate, potassium carbonate, and potassium phosphate tribasic (K₃PO₄).

23. The process according to claim 18, wherein the compound E is selected from a group consisting of
24. A process for preparing a compound H comprising carrying out a reaction between a compound F with a compound G under conditions suitable to produce a compound H, wherein
a. $R_2$ is selected from the group consisting of

\[
\begin{align*}
\text{H} & \quad \text{H} \\
\text{C} & \quad \text{O} \\
\text{C} & \quad \text{N} \\
\text{C} & \quad \text{N} \\
\text{C} & \quad \text{N} \\
\text{C} & \quad \text{O} \\
\text{C} & \quad \text{C} \\
\text{C} & \quad \text{N} \\
\text{Y}_1 & \quad \text{Y}_2 \\
\text{(CH}_2\text{)}\text{n}
\end{align*}
\]

wherein:

iv) each of $R_8$, $R_9$, $R_{10}$, and $R_{11}$ is independently selected from the group consisting of hydrogen, halogen and alkyl,

v) each of $Y_1$ and $Y_2$ is independently O, S, NH, or CH$_2$, or $Y_1$ is O, S or NH, and $Y_2$ is CH$_2$, with the proviso that $Y_1$ and $Y_2$ cannot both be O, S, or NH if n is 0 or 1, and

vi) * represents the point of attachment of the $R_2$ to the molecule of formula A

b. $R_3$ is selected from the group consisting of alkyl, alkyloxy, and halogen,

c. $R_4$ is selected from the group consisting of alkyl, aryl, heteroaryl, and adamantyl; $R_5$ is selected from the group consisting of alkyl, alkyloxy, alkylthio, aryl, and heteroaryl; or $R_4$ and $R_5$ may be linked together to form a substituted or unsubstituted 5- or 6-membered cycloalkyl or cycloalkenyl ring, where said substituents are selected from the group consisting of =O, halogen, alkyl, and where 1 or 2 of the carbon atoms on said 5- or 6-membered cycloalkyl or cycloalkenyl ring may be optionally replaced by W where W is selected from the group consisting of O, S, N, NH, alkylamino, and arylamino;

d. each of $R_{15}$ and $R_{16}$ is independently selected from the group consisting of =OH, alkyloxy, aryloxy, -NH$_2$, alkylamino, arylamino, N-aryl-N-alkylamino, -NH$\equiv$NH$_2$, alkylhydrazino, arylhydrazino, N-aryl-N-alkylhydrazino, -NHOR$_{17}$, alkyl, and aryl;

d. Z is selected from the group consisting of CH, and nitrogen;
e. m is 0, 1, 2 or 3; and

f. $R_{25}$ is selected from a group consisting of bromo, chloro, alkyl sulfonate, and aryl sulfonate.

25. The process according to claim 24, wherein the reaction is carried out in a solvent or a mixture of solvents selected from the group consisting of dioxane, tetrahydrofuran, toluene, benzene, water and tert-butanol.

26. The process according to claim 24, wherein the reaction is carried out between 25°C and 120°C.

27. The process according to claim 24, wherein the reaction is carried out in the presence of a mixture of a palladium catalyst, a ligand and a base.

28. The process according to claim 24, wherein the reaction is carried out in the presence of a mixture of a palladium catalyst selected from the group consisting of palladium (II) acetate, tris(dibenzylideneacetone)-dipalladium, palladium (II) acetylacetone, palladium (II) bromide, palladium (II) chloride, palladium (II) hexafluoroacetyleacetone, palladium (II) sulfate, and palladium (II) trifluoroacetate, a ligand selected from the group consisting of racemic-2,2'-bis(diphenylphosphino)-1,1'-binaphthyl, (R)-(+) 2,2'-bis(diphenylphosphino)-1,1'-binaphthyl, (S)-(−) 2,2'-bis(diphenylphosphino)-1,1'-binaphthyl, racemic-2,2'-bis(di-p-tolylphosphino)-1,1'-binaphthyl, (R)-(+) 2,2'-bis(di-p-tolylphosphino)-1,1'-binaphthyl, (S)-(−) 2,2'-bis(di-p-tolylphosphino)-1,1'-binaphthyl, racemic-2-(di-tert-butylphosphino)-1,1'-binaphthyl, (R)-2-(di-tert-butylphosphino)-1,1'-binaphthyl, (S)-2-(di-tert-butylphosphino)-1,1'-binaphthyl, 9,9-Dimethyl-4,5-bis(diphenylphosphino)xanthen, 2,2'-bis-(diphenylphosphino)-1,1'-biphenyl, racemic 4,12-bis(diphenylphosphino)-[2,2]-paracyclophane, (R)-(−)-4,12-bis(diphenylphosphino)-[2,2]-paracyclophane, (S)-(+) 4,12-bis(diphenylphosphino)-[2,2]-paracyclophane, 2-(di-cyclohexylphosphino)biphenyl, 2-dicyclohexylphosphino-2'-(N,N-dimethylamino)-1,1'-biphenyl, 2-dicyclohexylphosphino-2'-methyl-1,1'-biphenyl, 2-dicyclohexylphosphino-2'-isopropyl-1,1'-biphenyl, (2-dicyclohexylphosphino)-2',4',6'-triisopropyl-1,1'-biphenyl, 2-dicyclohexylphosphino-2',6'-dimethoxy-1,1'-biphenyl, 2-(di-tert-butylphosphino)-1,1'-biphenyl, 2-di-tert-butylphosphino-2'-(N,N-dimethylamino)-1,1'-biphenyl,
2-di-tert-butylphosphino-2′-methylbiphenyl, 2-di-tert-butylphosphino-2′-isopropylbiphenyl, (2-di-tert-butylphosphino)-2′,4′,6′-trisopropyl biphenyl, (2-di-tert-butylphosphino)-2′,6′-dimethoxybiphenyl, 2-(diphenylphosphino)biphenyl, 2-(diphenylphosphino)-2′-(N,N-dimethylamino)biphenyl, 2-diphenylphosphino-2′-methylbiphenyl, 2-diphenylphosphino-2′-isopropylbiphenyl, (2-diphenylphosphino)-2′,4′,6′-trisopropyl biphenyl, (2-diphenylphosphino)-2′,6′-dimethoxybiphenyl, 1,1-bis-(di-tert-butylphosphino)ferrocene, 1-diphenylphosphino-2-(di-tert-butylphosphino)-ethylferrocene, tri-tert-butylphosphine, and tri-cyclohexylphosphine, and a base selected from the group consisting of sodium tert-butoxide, potassium tert-butoxide, cesium carbonate, potassium carbonate, and potassium phosphate tribasic (K₃PO₄).

29. The process according to claim 24, wherein the compound H is selected from a group consisting of compounds having the formulae

![Chemical Structure Diagram]

30. A pharmaceutical composition comprising in a pharmaceutically acceptable vehicle suitable for enteral, parenteral, or topical administration, at least one compound according to claim 1 for treating a mammalian subject wherein said wherein said compound exerts its therapeutic effects via the in vivo modulation of lipid metabolism, lipid homeostasis, hyperlipidemia, skin-related processes, autoimmune diseases, fatty acid metabolism, malignant cell development, premalignant lesions, programed cell death, endocrinological processes, or AP-1 metabolism.

31. Pharmaceutically acceptable pro-drugs of compounds according to claim 1.
